Several expert panels: American Urologists Association, European Association of Urologists Association, Fran aise des Urologues etc are proposing guidelines aiming at providing detailed recommendations to the Urologists facing difficult urological scenarios and no significant discordance exist between them since they are all based on the existing published studies dealing with different aspects of the urological cancers.

**Treatment Options in Urological Cancer** Jonathan Waxman, 2008-04-15 Cancer forms a large part of urological practice. Prostate cancer is the most significant and is the second most common cause of male cancer deaths with some 300 000 cases in the USA annually. Cancer of the bladder is also common. While treatment has been primarily surgical, recent years have seen an explosion of new drug therapies for urological cancers. All urologists, whether in training or in practice, need an up to date survey of the literature and key findings in this important and controversial field. This book takes each organ in turn: prostate, kidney, bladder, testis, and penis, and tackles the controversies head on by inviting chapters on various, often rival treatments for each disease. Each section is then concluded by a commentary from the editor which draws together the various strands, outlines the principal areas of consensus and disagreement. Jonathan Waxman is an oncologist.
