

# Pumping blood

All day and all night, your heart pumps blood around your body. Blood takes oxygen to your cells.

The pulse you can feel at your neck and wrist is blood pumping through.

Blood carrying oxygen is shown in red. It delivers the oxygen and is shown in blue.

A red blood cell can travel around your body in under one minute!

An adult heart weighs about the same as a big potato.

Your heart pumps slowly when you sleep and much faster when you exercise.

Blood travels through different sized tubes (vessels) called arteries, veins and capillaries.

Here's a picture showing the inside of a heart.

Your heart has two sides that pump at the same time.

The right pump leads to the lungs (right ventricle).

The left pump leads to the rest of the body (left ventricle).

A large vein takes blood back to your heart.

The sound of your heart beating is made by your heart valves closing.

In one day, your blood travels an unbelievable 100,000 miles!

LUNGS

Blood coming from the heart

Blood going to rest of the body

Blood going to the heart

Valves control the blood flow

A large artery carries blood through your body

There are blood vessels around the heart too

The artery branches off into smaller blood vessels
