Bowden, Richard John Howarth, 2006 This Special Publication has 24 papers with an international authorship and is prefaced by an introductory overview which presents highlights in the field The first section covers the acceptance by science of the reality of the falls of rock and metal from the sky an account that takes the reader from BCE before common era to the nineteenth century The second section details some of the world's most important collections in museums their origins and development The Smithsonian chapter also covers the astonishingly numerous finds in the cold desert of Antarctica by American search parties There are also contributions covering the finds by Japanese parties in the Yamato mountains and the equally remarkable discoveries in the hot deserts of Australia North Africa Oman and the USA The other seven chapters take the reader through the revolution in scientific research on meteoritics in the later part of the twentieth century including terrestrial impact cratering and extraordinary showers of glass from the sky tektites now known to be Earth impact sourced Finally the short epilogue looks to the future

Antarctic Meteorites Yves Earhart, AI, 2025-03-20 Antarctic Meteorites explores how space rocks found in Antarctica provide unprecedented insights into our solar system's origins These meteorites fragments of asteroids and planets are uniquely concentrated in Antarctica due to the continent's glacial dynamics and unique climate The book elucidates how these space rocks inform planetary science and cosmochemistry offering a deep dive into understanding planet formation The book begins by introducing meteorites and Antarctic geography then progresses to explain why Antarctica is an ideal hunting ground focusing on glacial processes and meteorite stranding surfaces It then examines specific meteorite types like chondrites and iron meteorites illustrating how they contribute to our understanding of the solar system's age and composition The book also details the history of meteorite collection highlighting the scientific techniques and international collaborations involved Antarctic Meteorites reveals that the icy continent acts like a natural collector preserving these celestial objects for millennia By analyzing these meteorites scientists gain invaluable data comparable to ground truth for remote observations of space This organized and accessible approach makes the book an engaging read for anyone interested in Earth sciences planetary science and the mysteries of our solar system

Accretion of Extraterrestrial Matter Throughout Earth's History Bernhard Peucker-Ehrenbrink, Birger Schmitz, 2012-12-06 Every year Earth is bombarded with about 40 000 tons of extraterrestrial material This includes microscopic cosmic dust particles shed by comets and asteroids in outer space meteorites as well as large comets and asteroids that have led to catastrophic events in the geologic past Originally considered only a curiosity extraterrestrial matter found on Earth provides the only samples we have from comets asteroids and other planets Only recently mankind has started to actively collect extraterrestrial matter in space Apollo program Stardust mission rather than to wait for its delivery to Earth Still most of our knowledge of the origin and evolution of our solar system is based on careful studies of meteorites cosmic dust and traces of large impact

events in the geologic record such as the mass extinction that terminated the Cretaceous Period and led to the extinction of the dinosaurs This book summarizes our current knowledge of the properties origin orbital evolution and accretion mechanism of extraterrestrial matter accreted on Earth and sheds light on accretion processes and fluxes in the geologic past The chapters in the first part of the book are arranged in order to follow extraterrestrial matter from its origin in space its orbital evolution on its way to Earth its interaction with the Earth magnetosphere and atmosphere to its more or less violent collision with the Earth s surface In the second part of the book several chapters deal with the present day flux of cosmic dust and meteorites to Earth Finally several chapters deal with the reconstruction of the accretion history of extraterrestrial matter on Earth starting with the most recent geologic past and ending with the very early violent accretion period shortly after the formation of Earth Moon and other solid planets in our solar system
