Philosophy and the 'Dazzling Ideal' of Science Graham McFee,2019-08-27 Recent decades have seen attacks on philosophy as an irrelevant field of inquiry when compared with science In this book Graham McFee defends the claims of philosophy against attempts to minimize either philosophy s possibility or its importance by deploying a contrast with what Wittgenstein characterized as the dazzling ideal of science This dazzling ideal incorporates both the imagined completeness of scientific explanation whereby completing its project would leave nothing unexplained and the exceptionless character of the associated conception of causality On such a scientific world view what need is there for philosophy In his defense of philosophy and its truth claims McFee shows that rejecting such scientism is not automatically anti scientific and that it permits granting to natural science properly understood its own truth generating power Further McFee argues for contextualism in the project of philosophy and sets aside the pervasive and pernicious requirement for exceptionless generalizations while relating his account to interconnections between the concepts of person substance agency and causation
