

Upper Atmosphere

The Earth's atmosphere has four primary layers: the troposphere, stratosphere, mesosphere, and thermosphere. These layers protect our planet by absorbing harmful radiation.

Absorbing Ice in the Mesosphere (JUNO)

JUNO's scanning of ice in the Mesosphere (JUNO) reveals ice crystals were right where clouds in the mesosphere. These ice-filled clouds are made of ice crystals that form over the summer pole at an altitude 50 to 60 miles and a temperature too cold for water vapor clouds.

Thermosphere 50-600 Miles

In the Thermosphere, molecules of oxygen and nitrogen are ionized by solar radiation. This ionization produces free electrons and ions, creating the ionosphere that shields the Earth from incoming solar radiation. The thermosphere increases in temperature with altitude because the atoms, oxygen and nitrogen, cannot collide to cool the molecules.

Mesosphere 50-85 Miles

During the mesosphere, it is possible to see meteoroids being torn apart in the Earth's atmosphere and they burn (change their orbits). There the temperature is responsive to small changes in atmospheric density and composition. It could grow there to clouds, and at the end of the mesosphere, there are meteors that are changing in temperature due to water composition in the atmosphere.

Stratosphere 50-100 Miles

The lower layer has little to no water vapor and is the most stable layer of the atmosphere.

Troposphere 0-55 Miles

The troposphere is the layer of the Earth's atmosphere where all human activity takes place.

Ionosphere

The ionosphere is a layer of plasma formed by the ionization of atomic oxygen and nitrogen by highly energetic ultraviolet and X-ray solar radiation. The ionosphere extends from the bottom of the atmosphere up to the magnetosphere. This layer varies daily in the daytime compared to solar radiation causes the ionization of the atoms, but can extend down as far as the ionosphere. However, these upper atmospheric layers are still mostly neutral, with only one in a million particles becoming charged daily. At night, the ionosphere usually collapses in the dark, but it can extend down to about 100 miles in the thermosphere. There are still small amounts of charged atoms caused by cosmic radiation.

Balloons, Balloons, and Satellites

JUNO scientists use balloons to collect in-situ measurements in the atmosphere. However, the mesosphere and thermosphere are too high for balloons to reach, so scientists use instruments on sounding balloons and satellites to gather more detailed measurements of the upper atmosphere.

Communication

A unique property of the ionosphere is that it can reflect short-wave radio waves, enabling communication over great distances by "bouncing" signals off the actual atmosphere layer. Variability of the ionosphere can interrupt satellite communication, such as errors in GPS signals for commercial air navigation. During solar storms, this layer can even shut down communication between ground stations and satellites.

Reddened Clouds in the Mesosphere

Evidence of changes in the behavior of reddened clouds has been observed by the JUNO mission. Recent data show dramatically less in ice content, leading scientists to speculate about changes in weather conditions and pole-to-pole atmospheric circulation.

BARREL

The Ballot Army for Radiation-Induced Relativistic Electron Losses (BARREL) is a balloon-based mission to expand the measurements of NASA's STEP spacecraft. BARREL seeks to measure the precipitation of relativistic electrons from the ionosphere belts during two multi-balloon campaigns operated in the Southern Hemisphere.

The Upper Atmosphere in Motion Colin O. Hines, 1974 Published by the American Geophysical Union as part of the Geophysical Monograph Series Volume 18 I am advised that a preface though not necessary would at least be conventional Since this provides the one opportunity for conventionality that the volume as a whole opens up it would be churlish of me to decline A preface normally includes I am told an indication of both the reason that underlies the volume s very existence and the individuals to whom the volume is directed But part of the reason for the volume s existence lies strange though it may seem in communicating the reason for the volume s existence Since prefaces generally go unread I would be remiss if I attempted that communication here Instead I have left the attempt to the Introduction and Key which I believe has a better chance of being read Let us be willing to settle for the moment on the truly fundamental fact that the volume was prepared because I was prepared to prepare it and a publisher was prepared to publish it As to the intended readers they too must wait for their identification in the Introduction and Key unless they are willing to settle at this point on an identification as those who might be ready to read what I was prepared to prepare *The Upper Atmosphere* S.A.
