Us Defense Planning A Critique:

U.S. Defense Planning John M Collins, 2019-07-25 Superior defense plans fuse political economic military technological and sociological power in ways that cover state interests while conserving resources to the greatest prudent extent Poor products can increase costs without reducing risks because forces and funds that support slipshod schemes often fail to furnish security This critical appraisal of the U S defense planning system seeks to serve a five fold purpose set assessment standards appraise U S planning in principle appraise U S planning in practice identify U S planning problems and present optional courses of corrective action The study shows how domestic and foreign policy inputs from the White House National Security Council and State Department affect defense planning

Defence Planning as Strategic Fact Henrik Breitenbauch, André Ken Jakobsson, 2020-06-04 Defence Planning as Strategic Fact provides and elaborates on an upstream focus on the variegated organizational political and conceptual practices of military civilian administrative and political leaderships involved in defence planning offering an important security and strategic studies supplement to the traditional downstream focus on the use of force The book enables the reader to engage with the role of ideas in defence planning of organizational processes and biases path dependencies and administrative dynamics under the pressures of continuously changing domestic and international constraints The chapters show how defence planning must be seen as a constitutive element of defence and strategic studies that it is a strategic fact of its own which merits particular practical and scholarly attention As defence planning creates the conditions behind every peace upheld or broken and every war won or lost Defence Planning as Strategic Fact will be of great use to scholars of defence studies strategic studies and military studies This book was originally published as a special issue of Defence Studies

Note describes new concepts for building a high degree of military content into the automated war games. The concepts involve rule based logic structures that we call analytic war plans and higher resolution versions that we refer to as branched scripts. These logic structures define the range of strategies and grand tactics from which the computer models Red Agent and Blue Agent can choose. The Note also describes our intended approach to combat modeling and explains how we intend to achieve realism and to reflect effects of numerous special phenomena usually ignored by modelers e.g. attacks on C3I systems and disruptions of rear areas.
