Neuropsychology Aleksandra Bala,Szczepan Iwanski ,Aneta Szymaszek,2026-01-13 Neuropsychology is a dynamically developing field of science gathering researchers and clinicians interested in the neuronal background of behavioral cognitive and emotional functioning of a human in norm and pathology Research in this field makes it possible to learn about the brain mechanisms of individual mental processes but also and perhaps above all to create a profile of functioning of people affected by various diseases Diseases not only obviously related to brain functions such as brain tumors or strokes but also those that have an indirect impact such as endocrine metabolic or infectious diseases Recognizing the specific difficulties and needs of patients from various clinical groups is extremely important especially for specialists working in health care This is why it is so essential to conduct and publish a reliable research that thoroughly discuss these issues In neuropsychological diagnosis and therapy standard paper and pencil methods are still performed but new technologies computer methods virtual reality augmented reality are increasingly being used to get closer to the natural challenges faced by people Due to various factors distance pandemic etc diagnosis and therapy are more and more often carried out remotely without direct contact between the patient and the therapist The effectiveness of various methods of diagnosis and therapy is also the subject of scientific research The goal of this Research Topic is to present a collection of studies focusing on various aspects of clinical neuropsychology current research as well as future development of this field *Writing Research Reports*

,2006 **Aerial Aftermaths** Caren Kaplan,2017-12-21 From the first vistas provided by flight in balloons in the eighteenth century to the most recent sensing operations performed by military drones the history of aerial imagery has marked the transformation of how people perceived their world better understood their past and imagined their future In *Aerial Aftermaths* Caren Kaplan traces this cultural history showing how aerial views operate as a form of world making tied to the

times and places of war Kaplan's investigation of the aerial arts of war painting photography and digital imaging range from England's surveys of Scotland following the defeat of the 1746 Jacobite rebellion and early twentieth century photographic mapping of Iraq to images taken in the immediate aftermath of 9/11. Throughout Kaplan foregrounds aerial imagery's importance to modern visual culture and its ability to enforce colonial power demonstrating both the destructive force and the potential for political connection that come with viewing from above.

Doing and Writing Qualitative Research Adrian Holliday, 2002. A provocative yet valuable guide to doing and writing qualitative research. TESOL Quarterly. I have found this to be a refreshing and accessible book that makes a good basis for teaching qualitative methods. I would have no difficulty in recommending it to postgraduate students interested in this approach or indeed to PhD candidates who were not familiar with the qualitative approach. Nurse Researcher Holliday's book provides a useful framework for those doing and writing qualitative research. In addition it successfully brings to the fore some of the complex issues involved in qualitative research. Moreover due to Adrian Holliday's background and the wide range of authentic examples from education social sciences and health care this book will also be useful to a wider audience.

Applied Linguistics: How do you plan, organize and structure qualitative research writing? What are the step-by-step principles in setting out written work on qualitative research? This thoughtful and helpful book offers students an unparalleled primer in writing qualitative research. The book provides clear guidance on how subjectivity is managed and how scientific rigour is achieved by making the workings of written study transparent. Sensitive issues dealing with the proper use of identity in research settings are clearly discussed. Techniques for avoiding reductive essentialist judgements are presented and critically assessed. The daunting task of transferring data into text is expertly handled leaving students with a reliable source for all of their writing exercises in qualitative research. Examples are taken from a corpus of 20 examples of good writing from a range of disciplines and professional areas. The book emerges from many years of supervising writing in qualitative research and working with students in tutorials, research methodology classes, doctoral vivas and the author's own struggle to write. It is written with great empathy for the practical problems writers face in attempting to transfer the rich experience and data of their real world research into a written product. Timely, reliable and user-friendly it will be an indispensable guide for anyone involved in the research process. In particular the book will be of interest to students of sociology, applied linguistics, management, sport, health and education.

COVID and Autism 2023: Lessons Learnt and Future Directions for Research Michaela DuBay, Cecilia Montiel Nava, Georgina Perez Liz, Casara Jean Ferretti, 2024-09-05. It has been three years since many countries around the world were sent into a nationwide lockdown due to the coronavirus pandemic. As the disease infected the lungs of many people across the world, there were other adverse effects that came with not only the disease itself but the aftermath of the lockdowns. Those living with pre-existing conditions saw the COVID-19 pandemic affect them in different ways to those who were otherwise healthy. This Research Topic aims to highlight evidence on how the COVID-19 pandemic has affected and continues to affect

autistic individuals and to provide insights into research and interventions on how this can be tackled going forwards in the hope that the research presented will translate to best practice applications in clinical and public health settings
