THE STRUCTURE OF HUMAN MEMORY- ANNUAL MEETING- PAPERS- AAAS, SECTION ON PSYCHOLOGY J, SECTION ON INFORMATION AND COMMUNICATION, T. ,

Human Memory Modeled with Standard Analog and Digital Circuits John Robert Burger, 2009-07-31 Gain a new perspective on how the brain works and inspires new avenues for design in computer science and engineering This unique book is the first of its kind to introduce human memory and basic cognition in terms of physical circuits beginning with the possibilities of ferroelectric behavior of neural membranes moving to the logical properties of neural pulses recognized as

solitons and finally exploring the architecture of cognition itself It encourages invention via the methodical study of brain theory including electrically reversible neurons neural networks associative memory systems within the brain neural state machines within associative memory and reversible computers in general These models use standard analog and digital circuits that in contrast to models that include non physical components may be applied directly toward the goal of constructing a machine with artificial intelligence based on patterns of the brain Writing from the circuits and systems perspective the author reaches across specialized disciplines including neuroscience psychology and physics to achieve uncommon coverage of Neural membranes Neural pulses and neural memory Circuits and systems for memorizing and recalling Dendritic processing and human learning Artificial learning in artificial neural networks The asset of reversibility in man and machine Electrically reversible nanoprocessors Reversible arithmetic Hamiltonian circuit finders Quantum versus classical Each chapter introduces and develops new material and ends with exercises for readers to put their skills into practice Appendices are provided for non experts who want a quick overview of brain anatomy brain psychology and brain scanning The nature of this book with its summaries of major bodies of knowledge makes it a most valuable reference for professionals researchers and students with career goals in artificial intelligence intelligent systems neural networks computer architecture and neuroscience A solutions manual is available for instructors to obtain a copy please email the editorial department at ialine wiley com

**Models of Human Memory** Donald A. Norman,1970      **Structure of Human Memory** Charles N. Cofer,1976      *The Psychotherapist's Guide To Human Memory* Janet L. Jones,1999-07-02 By a noted cognitive psychologist the first guide to the latest knowledge about human memory specifically geared to the needs of psychotherapists and counselors      Human Memory John G. Seamon,1980      **Introduction to the Psychology of Memory** Michael J. A. Howe,1983      How Do Young Deaf Children Learn to Read? Bertram C. Bruce,Jana M. Mason,Jean F. Andrews,Michael D. Reddix,Robert A. Reeve,William E. Nagy,William F. Brewer,1984      Human Memory Johannes Engelkamp,Hubert D. Zimmer,1994 Our memory of simple action phrases such as comb your hair improves by about 50% when we actually act out the phrase Extensive studies on this self performance effect which is not explained by any of the current theories of episodic memory led the authors of this book to develop a fascinating multi modal model of memory The central idea of this model is that human information processing is to a certain extent decentralized and that episodic memory performance depends not only on central information processing but also on which systems are actually involved in the encoding and retrieval of the material itself This book describes the practical evidence and theoretical background for this model which not only challenges current concepts in the psychology of memory but also has potentially very important implications about how people might best learn to remember information in our increasingly multi modal information age
