Middleware for Communications Qusay Mahmoud, 2005-06-10 A state of the art guide to middleware technologies and their pivotal role in communications networks. Middleware is about integration and interoperability of applications and services running on heterogeneous computing and communications devices. The services it provides including identification, authentication, authorization, soft switching, certification, and security are used in a vast range of global appliances and systems from smart cards and wireless devices to mobile services and e-Commerce. Qusay H. Mahmoud has created an invaluable reference tool that explores the origins and current uses of middleware, highlighting the importance of such technologies as CORBA, J2EE, and JMS, and has thus compiled the roadmap to future research in this area. *Middleware for Communications* discusses the emerging fields of Peer to Peer (P2P) and grid middleware, detailing middleware platforms such as JXTA and the Globus middleware toolkit. Shows how Middleware will play a significant role in mobile computing. Presents a Platform Supporting Mobile Applications (PLASMA), a middleware platform that consists of components for location, event, and profile handling of Location Based Services. Introduces middleware security focusing on the appropriate aspects of CORBA, J2EE, and NET, and demonstrates how to realize complex security capabilities such as role based access control (RBAC) and mandatory access control (MAC). Discusses how Quality of Service (QoS) component middleware can be combined with Model Driven Architecture (MDA) technologies to rapidly develop, generate, assemble, and deploy flexible communications applications. This incomparable overview of middleware for communications is suitable for graduate students and researchers in communications and computing departments. It is also an authoritative guide for engineers and developers working on distributed systems, mobile computing, and networked appliances.

Design, Specification and Verification of Interactive Systems '97 Michael D. Harrison, Juan C. Torres, 2012-12-06 An increasing recognition of the role of the human system interface is leading to new extensions and styles of specification. Techniques are being developed that facilitate the expression of user-oriented requirements and the refinement and checking of specifications of interactive systems. This book reflects the state of the art in this important area and also contains a summary of working group discussions about how the various techniques represented might be applied to a common case study.

Instructional-design Theories and Models Charles M. Reigeluth, 2013-05-13 Instructional theory describes a variety of methods of instruction, different ways of facilitating human learning and development, and when to use and not use each of those methods. It is about how to help people learn better. This volume provides a concise summary

of a broad sampling of new methods of instruction currently under development helps show the interrelationships among these diverse theories and highlights current issues and trends in instructional design. It is a sequel to *Instructional Design Theories and Models: An Overview of Their Current Status* which provided a snapshot in time of the status of instructional theory in the early 1980s. Dramatic changes in the nature of instructional theory have occurred since then partly in response to advances in knowledge about the human brain and learning theory partly due to shifts in educational philosophies and beliefs and partly in response to advances in information technologies. These changes have made new methods of instruction not only possible but also necessary in order to take advantage of new instructional capabilities offered by the new technologies. These changes are so dramatic that many argue they constitute a new paradigm of instruction which requires a new paradigm of instructional theory. In short there is a clear need for this Volume II of *Instructional Design Theories and Models*. To attain the broad sampling of methods and theories it presents and to make this book more useful for practitioners as well as graduate students interested in education and training this volume contains twice as many chapters but each half as long as the ones in Volume I and the descriptions are generally less technical. Several unique features are provided by the editor to help readers understand and compare the theories in this book: Chapter 1 which discusses the characteristics of instructional theory and the nature of the new paradigm of instruction helps the reader identify commonalities across the theories; Chapter forewords which summarize the major elements of the instructional design theories are useful for reviewing and comparing theories as well as for previewing a theory to decide if it is of interest and for developing a general schema that will make it easier to understand; Editor's notes provide additional help in understanding and comparing the theories and the new paradigm of instruction to which they belong; Units 2 and 4 have introductory chapters to help readers analyze and understand the theories in those units. This is an essential book for anyone interested in exploring new approaches to fostering human learning and development and thinking creatively about ways to best meet the needs of learners in all kinds of learning contexts. Readers are invited to use Dr. Charles Reigeluth's Web site to comment and to view others' comments about the instructional design theories in this book as well as other theories. Useful to those working with a purely qualitative research design or mixed methods, the text provides a unique focus on writing and communications offering strategies for all stages of the process from research design to final product. This volume provides an overview of the research related to team-based work as well as a discussion of relevant changes in approaches to writing in the field. Readers will learn how to initiate team-based work through a digital tool kit approach, organize systems to insure efficiency and undertake the process of bringing together and training diverse teams. and substantive writing and it develops ways to further the aims of both as the project proceeds
