Abstract Machine Models for Parallel and Distributed Computing M. Kara, J. R. Davy, D. Goodeve, 1996 Abstract Machine Models have played a profound though frequently unacknowledged role in the development of modern computing systems They provide a precise definition of vital concepts allow system complexity to be managed by providing appropriate views of the activity under consideration enable reasoning about the correctness and quantitative performance of proposed problem solutions and encourage communication through a common medium of expression Abstract Models in Parallel and Distributed computing have a particularly important role in the development of contemporary systems encapsulating and controlling an inherently high degree of complexity The Parallel and Distributed computing communities have traditionally considered themselves to be separate However there is a significant contemporary interest in both of these communities in a common hardware model a set of workstation class machines connected by a high performance network The traditional Parallel Distributed distinction therefore appears under threat *Parallel Programming and Applications* Peter Fritzson, Leif Finmo, 1995 ZEUS Centres of European Supercomputing is a network for information exchange and co operation between European Supercomputer Centres During the fall of 1994 the idea was put forward to start an annual workshop to stimulate the exchange of ideas and experience in parallel programming and computing between researchers and users from industry and academia The first workshop in this series the ZEUS 95 Workshop on Parallel Programming and Computation is organized at Linkoping University where the Swedish ZEUS centre NSC National Supercomputer Centre is located This is open for all researchers and users in the field of parallel computing Correct Models of Parallel Computing S.
