Teague, 2021-10-12 Cities are often thought to be separate from nature but recent trends in ecocriticism demand that we consider them as part of the total environment This new collection of essays sharpens the focus on the nature of cities by exploring the facets of an urban ecocriticism by reminding city dwellers of their place in ecosystems and by emphasizing the importance of this connection in understanding urban life and culture The editors both raised in small towns but now living in major urban areas are especially concerned with the sociopolitical construction of all environments both natural and manmade Following an opening interview with Andrew Ross exploring the general parameters of urban ecocriticism they present essays that explore urban nature writing city parks urban wilderness ecofeminism and the city and urban space The volume includes contributions on topics as wide ranging as the urban poetry of English writers from Donne to Gay the manufactured wildness of a gambling casino and the marketing of cosmetics to urban women by idealizing Third World naturalness These essays seek to reconceive nature and its cultural representations in ways that contribute to understanding the contemporary cityscape They explore the theoretical issues that arise when one attempts to adopt and adapt an environmental perspective for analyzing urban life The Nature of Cities offers the ecological component often missing from cultural analyses of the city and the urban perspective often lacking in environmental approaches to contemporary culture By bridging the historical gap between environmentalism cultural studies and urban experience the book makes a statement of lasting importance to the development of the ecocritical movement Urban Environments in Emerging Economies David L. **Ecology of Urban Environments** Kirsten M. Parris, 2016-05-02 Provides an accessible introduction to urban ecology using established ecological theory to identify generalities in the complexity of urban environments. Examines the bio-physical processes of urbanization and how these influence the dynamics of urban populations, communities, and ecosystems. Explores the ecology of humans in cities. Discusses practical strategies for conserving biodiversity and maintaining ecosystem services in urban environments. Includes case studies with questions to improve retention and understanding.

*Healthy Urban Environments* Cecily Maller, 2018-05-20 Set in the human-environment interaction space, this book applies new theoretical and practical insights to understanding what makes healthy urban environments. It stems from recognition that the world is rapidly urbanising and the international concern with how to create healthy settings and liveable cities in the context of a rapidly changing planet. A key argument is that usual attempts to make healthy cities are limited by human-centrism and bifurcated western thinking about cities, health, and nature. Drawing on the innovative, more-than-human scholarship from a range of disciplines, it presents a synthesis of the main contributions and how they can be used to rethink what healthy urban environments are and who they are for. In particular, the book turns its attention to urban biodiversity and the many non-human species that live in, make, and share cities with humans. The book will be of interest to scholars and students in human geography, health, sociology, environmental humanities, public health, health promotion, planning, and urban design, as well as policymakers and professionals working in these fields.

*Urban Environment, Travel Behavior, Health, and Resident Satisfaction* Anzhelika Antipova, 2018-05-09 This book explores the intersections of urban development, travel patterns, and health. Currently, there is a lack of research concerning the subjective dimensions of accessibility in urban environments and travel behavior, as well as travel-related outcomes. Antipova fills this gap in the scholarship by developing an analysis of satisfaction and perception-related indicators at an intra-urban level. Specifically, she investigates various aspects of the urban environment from the perspective of resident perception and satisfaction, as well as the relationship between the urban environment, travel behavior, activity patterns, and traveler health.

*Constructed Climates* Will Wilson, 2011-02-28 This study demonstrates the value of urban green space. Focusing specifically on the role of vegetation and trees, the book shows the costs and benefits reaped from urban open spaces, from cooler temperatures to better quality ground water, and why it all matters. While a work of science, the book does not ignore the social component; it looks at low-income areas that have poor vegetation and shows how enhancing these areas through the planting of community gardens and trees can alleviate social ills.
