Mechanisms of Stimulus—Response Coupling in Platelets J. Westwick, M. F. Scully, D. E. MacIntyre, V. V. Kakkar, 2013-03-09 Since its inception the research area of platelet pharmacology has always been a vigorous one and it is a characteristic that new approaches to the understanding of platelet function are rapidly and thoroughly investigated The intensity of this activity is attributable probably to an appreciation by research workers in the field that a satisfactory therapeutic control of platelet function has yet to be realized Also that if and when this problem of controlling platelet function is achieved the benefits to clinical medicine will be immense since platelets are known to be involved in a multiplicity of events coupled within the haemostatic mechanisms and inflammatory responses Aberrations in the behaviour of platelets is part of the aetiology of atherosclerosis myocardial and cerebral infarction and thrombosis At this point in time research in platelet function is in a particularly rapid state of flux The recent findings of research workers active in the field and also workers investigating mechanisms of stimulus response coupling in other cells have provided interesting insights into the generality of mechanisms involved in the function of responsive cells One may itemize these developments as the area of cell receptor ligand interaction induction of cellular response by protein phosphorylation and calcium flux The mechanism of these latter events occurs through the activity of phospholipase generating transient intermediates These

intermediates may act as ionophores or enzyme activators or may in the case of eicosanoids reinforce and make irreversible the cellular response

Biochemical Actions of Hormones V8 Gerald Litwack, 2012-12-02 *Biochemical Actions of Hormones Volume VIII* is an eight chapter text that covers the developments in the understanding of the biochemical aspects of hormonal action and regulation This volume examines first the messenger functions of calcium in hormonal systems The next chapters deal with the neuronal regulation of blood pressure the regulation of protein synthesis by phosphorylation and the hormonal control of hepatic gluconeogenesis These topics are followed by discussions on the effects of insulin in intracellular functions the mechanisms of steroidal hormones and the membrane recognition and effector sites in steroid hormone action A chapter focuses on the activation of steroid receptor complexes The final chapters survey the estradiol and progesterone receptors in the human endometrium This book will be of great value to biologists biochemists and researchers in the field of hormonal action

The Neutrophil: Cellular Biochemistry and Physiology Maurice B. Hallett, 2018-01-18 A synthesis and collation of the recent material regarding the role of the neutrophil in basic pathological processes is presented in this volume The mechanisms of chemotaxis secretion phagocytosis intracellular killing oxygen radical production and arachidonate production are comprehensively reviewed Stimulus response coupling in the neutrophil with chapters on intracellular Ca²⁺ Kinase phospholipid metabolism microfilaments and membrane electrophysiology are extensively discussed Each chapter provides a critical review by experts with over 1 000 cited references Invaluable to graduate students and medical and scientific researchers this book provides a unique up to date account of cellular biochemistry and physiology of the neutrophil
