

2 The stellar initial mass function [32 points]

The two most popular stellar initial mass functions (IMFs) are the Kroupa and Salpeter IMFs. The Salpeter IMF has the form

$$\frac{dn}{dM} = kM^{-2.35},$$

with M the stellar mass in solar masses (M_{\odot}), n the number density of stars, and k a constant. Hence dn/dM is the number density of stars with masses between M and $M + dM$. The Kroupa IMF has the same powerlaw slope at $M > 0.5M_{\odot}$, but below $0.5M_{\odot}$ the power-law slope is -1.3, and thus

$$\frac{dn}{dM} = k_2M^{-1.30}.$$

This function is called a broken powerlaw. Assume both IMFs are only valid between 0.1 and 100 M_{\odot} , and no stars are formed outside this range.

a. [6 points] Given that the two powerlaws of the Kroupa IMF connect at $0.5M_{\odot}$, write k_2 as a function of k .

As discussed in class the most massive stars still alive dominate the light, and thus, it is extremely challenging to observe the light originating from lower mass stars. In order to

Beyond Λ CDM Sownak Bose,2018-08-02 This book employs computer simulations of artificial Universes to investigate the properties of two popular alternatives to the standard candidates for dark matter DM and dark energy DE It confronts the predictions of theoretical models with observations using a sophisticated semi analytic model of galaxy formation Understanding the nature of dark matter DM and dark energy DE are two of the most central problems in modern cosmology While their important role in the evolution of the Universe has been well established namely that DM serves as the building blocks of galaxies and that DE accelerates the expansion of the Universe their true nature remains elusive In the first half the authors consider sterile neutrino DM motivated by recent claims that these particles may have finally been detected Using sophisticated models of galaxy formation the authors find that future observations of the high redshift Universe and faint dwarf galaxies in the Local Group can place strong constraints on the sterile neutrino scenario In the second half the authors propose and test novel numerical algorithms for simulating Universes with a modified theory of gravity as an alternative explanation to accelerated expansion The authors techniques improve the efficiency of these simulations by more than a factor of 20 compared to previous methods inviting the readers into a new era for precision cosmological tests of gravity
