Gemstones and their distinctive Characters Frederik Herbert Smith,2020-03-06 Excerpt It has been my endeavour to provide in this book a concise yet sufficiently complete account of the physical characters of the mineral species which find service in jewellery and of the methods available for determining their principal physical constants to enable a reader even if

previously unacquainted with the subject to have at hand all the information requisite for the sure identification of any cut stone which may be met with For several reasons I have dealt somewhat more fully with the branches of science closely connected with the properties of crystallised matter than has been customary hitherto in even the most comprehensive books on precious stones Recent years have witnessed many changes in the jewellery world Gem stones are no longer entirely drawn from a few well marked mineral species which are on the whole easily distinguishable from one another and it becomes increasingly difficult for even the most experienced eye to recognise a cut stone with unerring certainty So long as the only confusion lay between precious stones and paste imitations an ordinary file was the solitary piece of apparatus required by the jeweller but now recourse must be had to more discriminative tests such as the refractive index or the specific gravity the determination of which calls for a little knowledge and skill Concurrently a keener interest is being taken in the scientific aspect of gem stones by the public at large who are attracted to them mainly by aesthetic considerations
