**Stochastic Models in Geosystems** Stanislav A. Molchanov, Wojbor A. Woyczynski, 2012-12-06 This IMA Volume in Mathematics and its Applications STOCHASTIC MODELS IN GEOSYSTEMS is based on the proceedings of a workshop with the same title and was an integral part of the 1993-94 IMA program on Emerging Applications of Probability We would like to thank Stanislav A Molchanov and Wojbor A Woyczynski for their hard work in organizing this meeting and in editing the proceedings We also take this opportunity to thank the National Science Foundation the Office of Naval Research the Army Research Office and the National Security Agency whose financial support made this workshop possible Avner Friedman Willard Miller Jr v PREFACE A workshop on Stochastic Models in Geosystems was held during the week of May 16 1994 at the Institute for Mathematics and Its Applications at the University of Minnesota It was part of the Special Year on Emerging Applications of Probability program put together by an organizing committee chaired by J Michael Steele The invited speakers represented a broad interdisciplinary spectrum including mathematics statistics physics geophysics astrophysics atmospheric physics fluid mechanics seismology and oceanography The common underlying theme was stochastic modeling of geophysical phenomena and papers appearing in this volume reflect a number of research directions that are currently pursued in these areas

**Emerging Applications of Probability (Stochastic Models in Geosystems).** ,1994 The workshop was devoted to several of the most active topics in this area and in particular covered Probabilistic models in geophysics including hierarchical models for geophysical structures homogenization of random elastic media propagation of seismic waves statistical methods for estimation of parameters of seismic waves prediction problems for seismic phenomena and other geophysical fields Modern probabilistic and statistical methods in oceanography and atmospheric sciences including probabilistic and statistical mechanical models of large scale ocean circulation random fields and stochastic partial differential equations techniques waves in the ocean in presence of random topography and random forcing random field modeling of salinity temperature and other physical fields weak turbulence Prediction problems Distribution functions for vorticity velocity and dissipation rates Intermittency and structure functions Singularities in Euler equations and their relation to turbulence Turbulent cascades and martingales

**Recent Advances in Partial Differential Equations, Venice 1996** Peter D. Lax, L. Nirenberg, Renato Spigler, Stephanos Venakides, Lax and Nirenberg are two of the most distinguished mathematicians of our times Their work on partial differential equations PDEs over the last half century has dramatically advanced the subject and has profoundly influenced the course of mathematics A huge part of the development in PDEs during this period has either been through their work motivated by it or achieved by their postdocs and students A large number of mathematicians honored these two exceptional scientists in a week long conference in Venice June 1996 on the occasion of their 70th birthdays This volume contains the proceedings of the conference which focused on the modern theory of nonlinear PDEs and their applications Among the topics treated are turbulence kinetic models of a rarefied gas

vortex filaments dispersive waves singular limits and blow up solutions conservation laws Hamiltonian systems and others The conference served as a forum for the dissemination of new scientific ideas and discoveries and enhanced scientific communication by bringing together such a large number of scientists working in related fields The event allowed the international mathematics community to honor two of its outstanding members

Goodchild, 2023-01-13 The recent emergence and widespread use of remote sensing and geographic information systems GIS has prompted new interest in scale as a key component of these and other geographic information technologies With a balanced mixture of concepts practical examples techniques and theory *Scale in Remote Sensing and GIS* is a guide for students and users of remote sensing and GIS who must deal with the issues raised by multiple temporal and spatial scales Sixteen pages of full color photographs help demonstrate key points made in the text

**Coupled Thermo-Hydro-Mechanical-Chemical Processes in Geo-systems** Ove Stephansson, John Hudson, Lanru Jing, 2004-11-03 Among the most important and exciting current steps forward in geo engineering is the development of coupled numerical models They represent the basic physics of geo engineering processes which can include the effects of heat water mechanics and chemistry Such models provide an integrating focus for the wide range of geo engineering disciplines The articles within this volume were originally presented at the inaugural GeoProc conference held in Stockholm and contain a collection of unusually high quality information not available elsewhere in an edited and coherent form This collection not only benefits from the latest theoretical developments but also applies them to a number of practical and wide ranging applications Examples include the environmental issues around radioactive waste disposal deep in rock and the search for new reserves of oil and gas
