Terrestrial Invasion:

The Terrestrial Invasion Colin Little,1990 The theme of this book is the invasion of land by animal lines which originated in aquatic environments It brings together physiological and ecological evidence to show both the likely routes taken out of the sea by the aquatic ancestors of terrestrial animals and the changes in structure and function associated with these routes The author takes an ecophysiological approach and by using representative examples provides a novel background against which both the terrestrial adaptations of individual species and the make up and function of terrestrial ecosystems can be considered Dr Little is the author of the highly acclaimed book *The Colonisation of Land* which discusses the phylogeny and physiology of terrestrial and semi terrestrial animals The *Terrestrial Invasion* takes a fresh approach and provides an excellent introduction to the origins of land animals suitable for ecologists physiologists and evolutionary biologists

Invasions of the Land Malcolm S. Gordon, Everett C. Olson,1994-03-15 *Invasions of the Land* *Conifer Reproductive Biology* Claire G. Williams,2009-05-19 When it comes to reproduction gymnosperms are deeply weird Cycads and conifers have drawn out reproduction at least 13 genera take over a year from pollination to fertilization Since they don't apparently have any selection mechanism by which to discriminate among pollen tubes prior to fertilization it is natural to wonder why such a delay in reproduction is necessary Claire Williams book celebrates such oddities of conifer reproduction She has written a book that turns the context of many of these reproductive quirks into deeper questions concerning evolution The origins of some of these questions can be traced back Wilhelm Hofmeister's 1851 book which detailed the revolutionary idea of alternation of generations This alternation between diploid and haploid generations was eventually to become one of the key unifying ideas in plant evolution Dr Williams points out that alternation of generations in conifers shows strong divergence in the evolution of male and female gametes as well as in the synchronicity of male and female gamete development How are these coordinated to achieve fertilization Books on conifer reproduction are all too rare The only major work in the last generation was Hardev Singh's 1978 *Embryology of Gymnosperms* a book that summarized the previous century's work Being a book primarily about embryology it stopped short of putting conifer reproduction in a genetic or evolutionary context
