**adaptive weighted feature pyramid network** Qianren Guo,Yuehang Wang,Yongji Zhang,Hongde Qin,Hong Qi,Yu Jiang,2023-09-19 Underwater scenarios are influenced by various factors such as light attenuation scattering and absorption which degrade the quality of images and pose significant challenges for underwater object detection in marine research and ocean engineering To address these challenges we propose a novel adaptive weight feature detection framework based on YOLOv8 called AWF YOLO designed to detect objects in turbid underwater scenarios accurately AWF YOLO incorporates several key components to improve detection performance Firstly a novel adaptive weight feature pyramid network is introduced to facilitate the fusion of multi scale feature semantics In addition an adaptive weight feature extraction module is

proposed to enhance underwater object detection by capturing relevant and discriminative information to enhance feature extraction further We integrate a dedicated small object detection head into the detection network to overcome the challenges associated with detecting small objects in complex underwater scenarios This component focuses on effectively identifying and localizing small objects leading to improved overall detection accuracy Extensive experiments conducted on the detection underwater objects dataset demonstrate that the proposed AWF YOLO achieves significant performance improvements thus making it highly suitable for complex and dynamic underwater scenarios [Underwater Digital Video Made Easy](#) Steven M.
