Veijalainen,2012-12-06 Transaction Management Support for Cooperative Application is a comprehensive report on a successful international project called TRANSCOOP carried out from 1994 to 1997 by a group of European scientists But the book is also much more than that namely an ambitious attempt to integrate Computer Supported Cooperative Work CSCW Workflow Management Systems WFMS and Transaction Processing TP technologies The very term em cooperative transactions is in itself contradictory Cooperation technologies such as CSCW aim at providing a framework for information exchange between cooperating human participants In contrast traditional transaction technologies allow concurrent users to operate on shared data while providing them with the illusion of complete isolation from each other To overcome this contradiction the TRANSCOOP researchers had to come up with a new and original notion of correctness of concurrent executions based on controlled exchange of information between concurrent users Merging histories in accordance with prespecified commutativity rules among concurrent

operations provides transactional guarantees to activities such as cooperative designing which until now had to be carried out sequentially As an interesting consequence it also provides a basis for management of consistency between disconnected or mobile users who operate independently and yet must occasionally reconcile their work with each other
