

Understanding Past Climates: Modelling Ancient Weather

This CD brings to researchers, self learners and learning facilitators results from some of the most sophisticated computer climate model experiments carried out to date. Technical information on the model parameters are supplied, but so too is a wealth of illustrated and animated background information that will be useful for those not familiar with climate modelling or the interpretation of palaeoclimates from the geological record.

Climate model results for the Late Carboniferous, latest Jurassic, middle and latest Cretaceous, Eocene, Miocene, glacial inception (125000 yrs), last glacial maximum (21000 yrs), mid Holocene (12000 yrs), the present day and the present day with 2x present levels of atmospheric carbon dioxide are given together with data for the observed present day climate. Results are given in the form of animations for temperature, soil moisture, precipitation, mean sea level air pressure, snow depth, storminess and cloudiness. The operation of the models is explained along with information on the structure and dynamics of the atmosphere and how the geological record can be used to determine past climate.

The CD will run under the Macintosh OS on a PowerMacintosh, or on a PC using Windows 95, Windows 98 or Windows NT, but QuickTime 3.0 must be installed for the animations to run. Installers for QuickTime 3.0 are included on the CD. For Windows NT running over a network the CD must first be run on each computer (workstation) that will subsequently use it using "administrator" privileges. This is so that the CD may write some essential files to Drive C.
