What Do The Animals Say:

What Would Animals Say If We Asked the Right Questions? Vinciane Despret, 2016-05-15 You are about to enter a new genre that of scientific fables by which I don't mean science fiction or false stories about science but on the contrary true ways of understanding how difficult it is to figure out what animals are up to Bruno Latour from the Foreword Is it all right to urinate in front of animals What does it mean when a monkey throws its feces at you Do apes really know how to ape Do animals form same sex relations Are they the new celebrities of the twenty first century This book poses twenty six such questions that stretch our preconceived ideas about what animals do what they think about and what they want In a delightful abecedarium of twenty six chapters Vinciane Despret argues that behaviors we identify as separating humans from animals do not actually properly belong to humans She does so by exploring incredible and often funny adventures about animals and their involvements with researchers farmers zookeepers handlers and other human beings Do animals have a sense of humor In reading these stories it is evident that they do seem to take perverse pleasure in creating scenarios that unsettle even the greatest of experts who in turn devise newer and riskier hypotheses that invariably lead them to conclude that animals are not nearly as dumb as previously thought These deftly translated accounts oblige us along the way to engage in both ethology and philosophy Combining serious scholarship with humor that will resonate with anyone this book with a foreword by noted French philosopher anthropologist and sociologist of science Bruno Latour is a must not only for specialists but also for general readers including dog owners who will never look at their canine companions the same way again

Why Animals Talk Arik Kershenbaum, 2024-08-06 Animal communication doesn't need to resemble human language to be full of meaning and nuance Arik Kershenbaum delivers an expert overview of the astonishing discoveries made in the last few decades Frans de Waal From leading zoologist Arik Kershenbaum a delightful and groundbreaking exploration of animal communication and its true meaning Animal communication has forever seemed intelligible We are surrounded by animals and the cacophony of sounds that they make from the chirping of songbirds to the growls of lions on the savanna but we have yet to fully understand why animals communicate the way they do What are they saying This is only part of the mystery To go deeper we must also ask what is motivating them Why Animals Talk is an exhilarating journey through the untamed world of animal communication Following his international bestseller The Zoologist's Guide to the Galaxy acclaimed zoologist Arik Kershenbaum draws on extensive original research to reveal how many of the animal kingdom's most seemingly confusing or untranslatable signals are in fact logical and consistent and not that different from our own His fascinating deep dive into this timeless subject overturns decades of conventional wisdom inviting readers to experience for the first time communication through the minds of animals themselves From the majestic howls of wolves and the enchanting chatter of parrots to the melodic clicks of dolphins and the spirited grunts of chimpanzees these often strange expressions are far from mere noise In fact they hold secrets that we are just beginning to decipher It's one of the oldest

mysteries that has haunted Homo sapiens for hundreds of thousands of years Are animals talking just like us or are we the only animals on the planet to have our own language What Do Animals Think and Feel? Karsten Brensing,2020-10-06 A fascinating study of animal behavior that reveals them to be as sentient and self aware as we humans are In What Do Animals Think and Feel biologist Karsten Brensing has something astonishing to tell us about the animal kingdom namely that animals by any reasonable assessment have developed the sophisticated systems of social organization and behaviour that human beings call culture Dolphins call one another by name and orcas inhabit a culture that is over 700 000 years old Chimpanzees wage strategic warfare while bonobos delight in dirty talk Ravens enjoy snowboarding on snow covered roofs and snails like to spin on hamster exercise wheels Humpback whales follow the dictates of fashion and rats are dedicated party animals Ants recognize themselves in mirrors and spruce themselves up before they return home Ducklings can pass complicated tests in abstract thinking Dogs punish disloyalty though they are also capable of forgiveness if you apologize to them Brensing draws on the latest scientific findings as well as his own experience working with animals to reveal a world of behavioral and cognitive sophistication that is remarkable similar to our own *Inferior animals. The general thaw. The light of life. Gifts. Night and day. Kicking. Imperfect instruments. Cobwebs. Birds in the nest. Consequences. The cause and the causer. Ghosts. "These three." The universal language. See-saw. A vision. Unopened parcels* Mrs. Alfred Gatty,1900
