World Forests Society And Environment:

World Forests, Society and Environment Matti Palo, J. Uusivuori, 2012-12-06 This book addresses current global and regional issues concerning the world's forests, societies and the environment from an independent and non-governmental point of view. A main message is that cooperation on a global scale is not only commendable but essential if solutions to the problems facing the world's forests are to be found. To achieve this, modern science needs to find a clearer picture of relationships between forests, human activity and the environment and of the consequences of environmental change for the ability of societies to survive. Part I: Editorial Perspectives is analyzing the ongoing globalization processes of forests, societies and the environment. Part II: Society and Environment reviews worldwide trends with significance for the future of forests and forestry. While the trends are influenced by forest sector issues, that sector is influenced to a much larger extent by external factors such as demography, urbanization or technological development. Part III: Importance of Forests looks at the value of the goods and services of forests, tangible and intangible, market and non-market, and concludes that failure to recognize their full value is one of the crucial impediments to sustainable development. In Part IV: Global Forum, scientists take up global forestry themes: deforestation, trade and the environment, climate change, biodiversity, with the aim of stimulating wider discussion. Part V: Regional Forum looks at major themes of particular relevance to Africa, Asia, Pacific, Latin America, North America and Europe, such as farm and agroforestry, corruption and concessions, urban forestry and environmental conflicts. Part VI introduces the special theme: forest sectors in transition economies. Teams of scientists from Russia and China focus on the implications of the transition from plan to market economy, illuminating both the very different nature of the forest sector in the two countries and the different transition paths that they have adopted. In the past millennium, the entire world has been discovered. In the past half century, the contribution of forests to the economy worldwide has been perceived, while only recently have their societal and environmental benefits been globally recognized. Globalization is a demanding process requiring knowledge and information. This book offers knowledge, facts and information, but also values from diverse human and cultural perspectives about world forests, society and environment to help us towards equity in our use of the global forest to create a clearer vision on a unassailable.

Sustainable Development Goals: Their Impacts on Forests and People Pia Katila, Carol J. Pierce Colfer, Wil de Jong, Glenn Galloway, Pablo Pacheco, Georg Winkel, 2019-12-12 Forests provide vital ecosystem services crucial to human well-being and sustainable development and have an important role to play in achieving the seventeen Sustainable Development Goals (SDGs) of the United Nations 2030 Agenda. Little attention, however, has yet focused on how efforts to achieve the SDGs will impact forests and forest-related livelihoods and how these impacts may in turn enhance or undermine the contributions of forests to climate and development. This book discusses the conditions that influence how SDGs are implemented and prioritised and provides a systematic

multidisciplinary global assessment of interlinkages among the SDGs and their targets increasing understanding of potential synergies and unavoidable trade offs between goals Ideal for academic researchers students and decision makers interested in sustainable development in the context of forests this book will provide invaluable knowledge for efforts undertaken to reach the SDGs This title is available as Open Access via Cambridge Core **Forests and Society**, 2010 **Making Forests Work for People and Nature** Pia Katila, 2010 This policy brief is based on the book *Forest and Society Responding to Global Drivers of Change* produced by the IUFRO WFSE in 2010 The book was an output of a collaborative effort that involved scientists and experts from around the world It focused on identifying the main global drivers of change and their direct and indirect effects on forests forestry and forest dependent people and it proposes ways to respond to the drivers of change and to take advantage of the opportunities they may provide This policy brief conveys in a concise format some of the main findings conclusions and recommendations of this book P 33 *Forests and Society* Kristiina A. The Social Ecology of Tropical Forests Wil de Jong, Tuck-Po Lye, Ken-ichi Abe, 2006 The Social Ecology of Tropical Forests brings together various analyses from the three major tropical regions Southeast Asia the Amazon basin and Sub Saharan Africa and by challenging simplistic correlations the authors explore the complex relationships between deforestation and migration The book provides both an historical overview of migration into these regions and presents contemporary case studies to reveal the complex interplay of factors motivating migration The scope of the discussion is extensive covering historical issues such as the impact of the slave trade on Sub Saharan African forests and communities and contemporary dilemmas like the over exploitation of natural forest products in Vietnam The authors look at the broader picture of intertwining political social geographical environmental and historical influences without seeking quick fix solutions to the social and environmental issues arising from increasing forest cover loss The analyses are spatially and temporally contextualized drawing on both qualitative and quantitative data to provide a useful resource for studying the societies of tropical regions and their social ecology
