Advances in Haptics Mehrdad Hosseini Zadeh, 2010-04-01

Haptic interfaces are divided into two main categories force feedback and tactile Force feedback interfaces are used to explore and modify remote virtual objects in three physical dimensions in applications including computer aided design computer assisted surgery and computer aided assembly Tactile interfaces deal with surface properties such as roughness smoothness and temperature Haptic research is intrinsically multi disciplinary incorporating computer science engineering control robotics psychophysics and human motor control By extending the scope of research in haptics advances can be achieved in existing applications such as computer aided design CAD tele surgery rehabilitation scientific visualization robot assisted surgery authentication and graphical user interfaces GUI to name a few Advances in Haptics presents a number of recent contributions to the field of haptics Authors from around the world present the results of their research on various issues in the field of haptics

Fundamentals of Wearable Computers and Augmented Reality Woodrow Barfield, 2015-07-29

Data will not help you if you can't see it where you need it Or can't collect it where you need it Upon these principles wearable technology was born And although smart watches and fitness trackers have become almost ubiquitous with in body sensors on the horizon the future applications of wearable computers hold so much more A trusted refer

Ultrasound

Mid-Air Haptics for Touchless Interfaces Orestis Georgiou, William Frier, Euan Freeman, Claudio Pacchierotti, Takayuki Hoshi, 2022-09-16 Over the last decade ultrasound mid air haptic technology has emerged and rapidly advanced to engage multidisciplinary scientific communities within and adjacent to the haptics and HCI fields Additionally this haptic technology has been adopted by a number of industry sectors e.g automotive virtual reality digital signage neuroscience research who appear keen to exploit its unique value proposition the ability to deliver rich haptic sensations from a distance without the need to touch wear or hold anything in order to enhance touchless interfaces novel applications and experiences This book is the first and currently the only one that provides a comprehensive description of the technology encapsulating almost all aspects relating to electronic prototyping acoustics haptics psychology and perception user experience and end user HCI applications Through its 18 chapters written by 30 expert co authors this book is therefore an excellent introduction to the technology for anyone coming from any of those fields Specifically the reader will benefit by getting a unique and multi dimensional perspective on the state of the art of this enabling haptic technology while also understanding its history relevant best research practices and an overview of the various open challenges and opportunities

Humans, Robots and

Virtual Worlds in the Tactile Internet Frank H. P. Fitzek, Shu-Chen Li, Stefanie Speidel, Thorsten Strufe, Toktam

Mahmoodi, Martin Reisslein, 2026-02-17 Humans Robots and Virtual Worlds in the Tactile Internet is a groundbreaking comprehensive guide to this innovative communication platform that merges the physical and digital worlds transforming how we experience the Metaverse and interact with robots and other cyber physical systems From exploring real world

applications in healthcare industry education and beyond to delving into the cutting edge components sensors and communication systems that underpin this transformation this book offers a multidisciplinary view of the Tactile Internet revolution This is an essential read for academic researchers students industry professionals and R D engineers seeking a comprehensive up to date and forward looking approach to understanding the Tactile Internet s intersection with the Metaverse together with its far reaching implications Provides a visionary forward looking perspective on the Tactile Internet s role in the Metaverse s evolution Includes an interdisciplinary collaboration with a diverse group of experts spanning various disciplines Presents advancements in 6G Technology including breakthrough technologies that have not been seen in any wireless generation before Covers use cases of the Tactile Internet including Theranostics Care and Robot Assisted Surgery Discusses human centred design with a strong emphasis on designing Tactile Internet Systems that respect human senses individuality and the quality of human experience

Motor Control Frederic Danion, PhD, Mark Latash, PhD, 2010-12-17 Motor control has established itself as an area of scientific research characterized by a multi disciplinary approach Scientists working in the area of control of voluntary movements come from different backgrounds including but not limited to physiology physics psychology mathematics neurology physical therapy computer science robotics and engineering One of the factors slowing progress in the area has been the lack of communication among researchers representing all these disciplines A major objective of the current book is to overcome this deficiency and to promote cooperation and mutual understanding among researchers addressing different aspects of the complex phenomenon of motor coordination The book offers a collection of chapters written by the most prominent researchers in the field Despite the variety of approaches and methods all the chapters are united by a common goal To understand how the central nervous system controls and coordinates natural voluntary movements This book will be appreciated as a major reference by researchers working in all the subfields that form motor control It can also be used as a supplementary reading book for graduate courses in such fields as kinesiology physiology biomechanics psychology robotics and movement disorders In one concise volume Motor Control presents the diversity of the research performed to understand human movement Deftly organized into 6 primary sections the editors Dr Fr d ric Danion and Dr Mark Latash have invited the who s who of specialists to write on MotorControl Control of a Complex Cortical Mechanisms of Motor Control Lessons from Biomechanics Lessons from Motor Learning and Using Tools Lessons from Studies of Aging and MotorDisorders and Lessons from Robotics Motor Control will quickly become the go to reference for researchers in this growing field Researchers from mechanics and engineering to psychology and neurophysiology as well as clinicians working in motor disorders and rehabilitation will be equally interested in the pages contained herein
