Stochastic Processes With Multidimensional Parameter:

Stochastic Processes with a Multidimensional Parameter M. Dozzi, 1989 Multiparameter Processes Davar Khoshnevisan, 2006-04-10 Multi parameter processes extend the existing one parameter theory in an elegant way and have many applications to other fields in mathematics such as real analysis functional analysis group theory and analytic number theory to name a few This book on the vast and rapidly developing subject of random fields is designed for a second graduate course in probability Recent work on random fields has made it possible to make it an expository subject which interacts with several other areas in mathematics and has enough mathematical depth to be of use to pure as well as applied

mathematicians of many backgrounds **On Two Parameter Levy Processes** Maria Eulália Vares, 1980 *Set-Indexed Martingales* B.G. Ivanoff, Ely Merzbach, 2024-12-15 Set Indexed Martingales offers a unique comprehensive development of a general theory of Martingales indexed by a family of sets The authors establish for the first time an appropriate framework that provides a suitable structure for a theory of Martingales with enough generality to include many interesting examples Developed from first principles the theory brings together the theories of Martingales with a directed index set and set indexed stochastic processes Part One presents several classical concepts extended to this setting including stopping predictability Doob Meyer decompositions martingale characterizations of the set indexed Poisson process and Brownian motion Part Two addresses convergence of sequences of set indexed processes and introduces functional convergence for processes whose sample paths live in a Skorokhod type space and semi functional convergence for processes whose sample paths may be badly behaved Completely self contained the theoretical aspects of this work are rich and promising With its many important applications especially in the theory of spatial statistics and in stochastic geometry Set Indexed Martingales will undoubtedly generate great interest and inspire further research and development of the theory and applications

Continuation of Research on Multiparameter Stochastic Processes E. Wong, CALIFORNIA UNIV BERKELEY ELECTRONICS RESEARCH LAB., 1985 To study Markov processes with a multidimensional parameter necessitates the introduction of generalized processes that can be localized to surfaces A vehicle for dealing with these is stochastic cochains processes parameterized by k dimensional surfaces in n dimensional surface The principal result of this project has been the development of a theory of stochastic cochains Author **Introduction to the Statistics of Poisson Processes and Applications** Yury A. Kutoyants, 2023-09-04 This book covers an extensive class of models involving inhomogeneous Poisson processes and deals with their identification i e the solution of certain estimation or hypothesis testing problems based on the given dataset These processes are mathematically easy to handle and appear in numerous disciplines including astronomy biology ecology geology seismology medicine physics statistical mechanics economics image processing forestry telecommunications insurance and finance reliability queuing theory wireless networks and localisation of sources Beginning with the definitions and properties of some fundamental notions stochastic integral likelihood ratio limit theorems etc the

book goes on to analyse a wide class of estimators for regular and singular statistical models Special attention is paid to problems of change point type and in particular cusp type change point models then the focus turns to the asymptotically efficient nonparametric estimation of the mean function the intensity function and of some functionals Traditional hypothesis testing including some goodness of fit tests is also discussed The theory is then applied to three classes of problems misspecification in regularity MiR corresponding to situations where the chosen change point model and that of the real data have different regularity optical communication with phase and frequency modulation of periodic intensity functions and localization of a radioactive Poisson source on the plane using K detectors Each chapter concludes with a series of problems and state of the art references are provided making the book invaluable to researchers and students working in areas which actively use inhomogeneous Poisson processes

Signal Processing in Radar Systems Vyacheslav Tuzlukov, 2017-12-19 An essential task in radar systems is to find an appropriate solution to the problems related to robust signal processing and the definition of signal parameters *Signal Processing in Radar Systems* addresses robust signal processing problems in complex radar systems and digital signal processing subsystems It also tackles the important issue of defining signal parameters The book presents problems related to traditional methods of synthesis and analysis of the main digital signal processing operations It also examines problems related to modern methods of robust signal processing in noise with a focus on the generalized approach to signal processing in noise under coherent filtering In addition the book puts forth a new problem statement and new methods to solve problems of adaptation and control by functioning processes Taking a systems approach to designing complex radar systems it offers readers guidance in solving optimization problems Organized into three parts the book first discusses the main design principles of the modern robust digital signal processing algorithms used in complex radar systems The second part covers the main principles of computer system design for these algorithms and provides real world examples of systems The third part deals with experimental measurements of the main statistical parameters of stochastic processes It also defines their estimations for robust signal processing in complex radar systems Written by an internationally recognized professor and expert in signal processing this book summarizes investigations carried out over the past 30 years It supplies practitioners researchers and students with general principles for designing the robust digital signal processing algorithms employed by complex radar systems
