Stone Spaces:

Stone Spaces Peter T. Johnstone, 1982 A unified treatment of the corpus of mathematics that has developed out of M H Stone's representation theorem for Boolean algebras 1936 which has applications in almost every area of modern mathematics

Stone Spaces Peter T. Johnstone, 1986-08-14 Over the last 45 years Boolean theorem has been generalized and extended in several different directions and its applications have reached into almost every area of modern mathematics but since it lies on the frontiers of algebra geometry general topology and functional analysis the corpus of mathematics which has arisen in this way is seldom seen as a whole In order to give a unified treatment of this rather diverse body of material Dr Johnstone begins by developing the theory of locales a lattice theoretic approach to general topology without points which has achieved some notable results in the past ten years but which has not previously been treated in book form This development culminates in the proof of Stone's Representation Theorem

Encyclopaedia of Mathematics Michiel Hazewinkel, 2012-12-06 This ENCYCLOPAEDIA OF MATHEMATICS aims to be a reference work for all parts of mathematics It is a translation with updates and editorial comments of the Soviet Mathematical Encyclopaedia published by Soviet Encyclopaedia Publishing House in five volumes in 1977 1985 The annotated translation consists of ten volumes including a special index volume There are three kinds of articles in this ENCYCLOPAEDIA First of all there are survey type articles dealing with the various main directions in mathematics where a rather fine subdivision has been used The main requirement for these articles has been that they should give a reasonably complete up to date account of the current state of affairs in these areas and that they should be maximally accessible On the whole these articles should be understandable to mathematics students in their first specialization years to graduates from other mathematical areas and depending on the specific subject to specialists in other domains of science engineers and teachers of mathematics These articles treat their material at a fairly general level and aim to give an idea of the kind of problems techniques and concepts involved in the area in question They also contain background and motivation rather than precise statements of precise theorems with detailed definitions and technical details on how to carry out proofs and constructions The second kind of article of medium length contains more detailed concrete problems results and techniques

Measure Theory D. H. Fremlin, 2000 *Mathematics of Fuzzy Sets* Ulrich Höhle, S.E.

Rodabaugh,1998-12-31 Mathematics of Fuzzy Sets Logic Topology and Measure Theory is a major attempt to provide much needed coherence for the mathematics of fuzzy sets Much of this book is new material required to standardize this mathematics making this volume a reference tool with broad appeal as well as a platform for future research Fourteen chapters are organized into three parts mathematical logic and foundations Chapters 1 2 general topology Chapters 3 10 and measure and probability theory Chapters 11 14 Chapter 1 deals with non classical logics and their syntactic and semantic foundations Chapter 2 details the lattice theoretic foundations of image and preimage powerset operators Chapters 3 and 4 lay down the axiomatic and categorical foundations of general topology using lattice valued mappings as a fundamental tool Chapter 3 focuses on the fixed basis case including a convergence theory demonstrating the utility of the underlying axioms Chapter 4 focuses on the more general variable basis case providing a categorical unification of locales fixed basis topological spaces and variable basis compactifications Chapter 5 relates lattice valued topologies to probabilistic topological spaces and fuzzy neighborhood spaces Chapter 6 investigates the important role of separation axioms in lattice valued topology from the perspective of space embedding and mapping extension problems while Chapter 7 examines separation axioms from the perspective of Stone Cech compactification and Stone representation theorems Chapters 8 and 9 introduce the most important concepts and properties of uniformities including the covering and entourage approaches and the basic theory of precompact or complete 0 1 valued uniform spaces Chapter 10 sets out the algebraic topological and uniform structures of the fundamentally important fuzzy real line and fuzzy unit interval Chapter 11 lays the foundations of generalized measure theory and representation by Markov kernels Chapter 12 develops the important theory of conditioning operators with applications to measure free conditioning Chapter 13 presents elements of pseudo analysis with applications to the Hamilton Jacobi equation and optimization problems Chapter 14 surveys briefly the fundamentals of fuzzy random variables which are 0 1 valued interpretations of random sets
