**Bridging the Diversity Divide** Edna Chun,Alvin Evans,2009-05-18 The

sweeping forces of globalization present new challenges for higher education but also represent a clear mandate for change. Because of the unfinished business of remedying the representation of minorities and women in higher education this book is designed to assist campus leaders and educators in the difficult process of cultural transformation in support of diversity and inclusion. The book explores the model of reciprocal empowerment as a moral framework linking the institution's values, culture, and workplace practices to the outside world through the prism of diversity. The focus is on research-based strategies which will enable institutions of higher education to assess current practices, create successful action plans, and move beyond structural representation to true reciprocal empowerment. The measurement strategies, organizational learning tools, and best practices included here will assist institutions of higher education in building a flexible repertoire of institutional approaches to reciprocal empowerment and inclusion.

**Regional Variations in the Evolution of the Household Responsibility System in China** Zhiqun Xue-Lascoux, 1994

**Complexity Theory for a Sustainable Future** Jon Norberg, Graeme S. Cumming, 2008

Complexity theory illuminates the many interactions between natural and social systems providing a better understanding of the general principles that can help solve some of today's most pressing environmental issues. Complexity theory was developed from key ideas in economics, physics, biology, and the social sciences and contributes to important new concepts for approaching issues of environmental sustainability such as resilience, scaling, and networks. *Complexity Theory for a Sustainable Future* is a hands-on treatment of this exciting new body of work and its applications, bridging the gap between theoretical and applied perspectives in the management of complex adaptive systems. Focusing primarily on natural resource management and community-based conservation, the book features contributions by leading scholars in the field, many of whom are among the leaders of the Resilience Alliance. Theoreticians will find a valuable synthesis of new ideas on resilience, sustainability, asymmetries, information processing, scaling, and networks. Managers and policymakers will benefit from the application of these ideas to practical approaches and empirical studies linked to social-ecological systems. Chapters present new twists on such existing approaches as scenario planning, scaling analyses, and adaptive management, and the book concludes with recommendations on how to manage natural resources, how to involve stakeholders in the dynamics of a system, and how to explain the difficult topic of scale. A vital reference for an emerging discipline, this volume provides a clearer understanding of the conditions required for systems self-organization, since the capacity of any system to self-organize is crucial for its sustainability over time.

**Racial Diversity in Legal Education** Ann Mallatt Killenbeck, 2000

Finally, the influence of three separate student diversity experiences was measured: student cross-race interaction, classroom exposure to diversity issues, and attendance at one or more racial awareness workshops. One or more of these variables significantly influenced three of the follow-up attitudes.
