Forecasting Oracle Performance Craig Shallahamer,2007-10-05 What makes seasoned IT professionals run for cover Answer Forecasting Oracle Performance Craig Shallahamer is an Oracle performance expert with over 18 years of experience His book is the first to focus not on the problem of solving today s problem but squarely on the problem of forecasting the future performance of an Oracle database Other Oracle performance books are good for putting out fires Craig s book helps you avoid all the heat in the first place If you re an IT practioner who appreciates application over mathematical proofs than you ll be pleasantly surprised Each chapter is filled with examples to transform the theory mathematics and methods into something you can practically apply Craig s goal is to teach you about real word Oracle performance forecasting Period There is no hidden agenda This book is a kind of training course After reading studying and practicing the material covered in this book you to be able to confidently responsibly and professionally forecast performance and system capacity in a wide variety of real life situations If you are more management minded or want to be you will be delighted with the service level management focus Forecasting makes good business sense because it maximizes the return on IT investment and minimizes unplanned down time To those who think forecasting is a waste of money well obviously they ve never been on the evening news because their company lost millions of dollars in revenue and brand destruction because of poorly performing or unavailable systems Without a doubt you will be equipped to deal with the realities of forecasting Oracle performance But this book gives you more Not only will you receive a technical and mathematical perspective but also a communication a presentation and a management perspective This is career building stuff and immensely satisfying

Understanding Operating Systems Ida M. Flynn,Ann McIver-Mchoes,2000-11

System-oriented Evaluation of I/O Subsystem Performance Gregory Robert Ganger,1995 Abstract This dissertation demonstrates that the conventional approach for evaluating the performance of an I O subsystem design which is based on standalone subsystem models is too narrow in scope In particular conventional methodology treats all I O requests equally

ignoring differences in how individual request response times affect system behavior As a result it often leads to inaccurate performance predictions and can thereby lead to incorrect conclusions and poor design choices A new methodology which expands the model s scope to include other important system components e g CPUs and system software is proposed and shown to enable accurate predictions of both subsystem and overall system performance This dissertation focuses on two specific problems with conventional methodology 1 Benchmark workloads are often not representative of reality in that they do not accurately reflect feedback effects between I O subsystem performance in particular individual request completion times and the workload of requests in particular subsequent request arrivals 2 Changes in I O subsystem performance e g as measured by mean request response times do not always translate into similar changes in overall system performance e g as measured by mean elapsed times for user tasks These problems are fundamental to the subsystem oriented approach and are independent of the model s accuracy The first problem is illustrated with several examples where commonly utilized workload generators trivialize feedback effects and produce unrealistic workloads In each case quantitative and or qualitative errors result The second problem is illustrated with a disk scheduling algorithm that gives priority to those requests that are most critical to overall system performance This change increases overall system performance while decreasing storage subsystem performance as indicated by subsystem metrics In all of the experiments the new methodology is shown to avoid the short comings of conventional methodology
