Mindfulness Meditation Trending:

Trends in Psychotherapy Research M. E. Abelian, 2006 Psychotherapy is the treatment of mental and emotional disorders using psychological methods Psychotherapy thus does not include physiological interventions such as drug therapy or electroconvulsive therapy although it may be used in combination with such methods Behaviour therapy aims to help the patient eliminate undesirable habits or irrational fears through conditioning Techniques include systematic desensitisation particularly for the treatment of clients with irrational anxieties or fears and aversive conditioning which uses negative stimuli to end bad habits Humanistic therapy tends to be more optimistic basing its treatment on the theory that individuals have a natural inclination to strive toward self fulfilment Therapists such as Carl Rogers and Abraham Maslow used a highly interactive client therapist relationship compelling clients to realise exactly what they are saying or how they are behaving in order to foster a sense of self awareness Cognitive therapies try to show the client that certain usually negative thoughts are irrational with the goal of restructuring such thoughts into positive constructive ideas Such methods include rational emotive therapy where the therapist argues with the client about his negative ideas and cognitive restructuring therapy in which the therapist works with the client to set attainable goals Other forms of therapy stress helping patients to examine their own ideas about themselves

Metacognition and Education: Future Trends Shirley Larkin, 2023-10-06 Metacognition is crucial to education in a changing world The role of mobile applications AI and global issues such as climate change make the need for developing learners with the ability to monitor and control their own thinking increasingly necessary Metacognitive learners are learners who can draw on their own knowledge of their own thinking processes to optimise the conditions under which they learn best Metacognitive learners are self regulating and pro active in motivating themselves to learn new skills Metacognitive learners are strategic in terms of managing their own resources to get the best from every learning opportunity and to transfer that knowledge to new areas of work This book is timely in demonstrating how metacognition research is addressing issues of importance in future education The chapters are authored by an international group of scholars from four continents who are experts in the field of metacognition and self regulation research Drawing on their years of experience they look to the future to suggest the future trends in metacognition research At the same time chapters are rooted in practical application and suggest ways in which the research can be translated into educational environments The book addresses some new areas of metacognition research such as mind wandering as well as established areas such as teacher metacognition We are also reminded to consider the social interactions between students and others and the role that relationships play in developing metacognition Both researchers and educators of all types will find something of interest here The book sets the trend for future trends in metacognition research *Research Trends in Education and Teaching Strategies* Chief Editor (Author)- Biplab Auddya, Editor- Rajesh.E, Dr. Poornima Eknath Surve, Dr. Krushna Chandra Panda, Jyotirmayee Priyadarsini Panda, Dr. Deepesh Kumar Thakur, Dr. Rajkumari, Dr. Vijayalakshmi.
