

## A Tale of Two Pandas An Evolutionary Mystery

### Evidence Crossin'

Giant Pandas are somewhat of an evolutionary mystery. They have some characteristics of other bears, but also characteristics of animals like the red panda, a member of the raccoon family (trash panda?) ☹️

So where did the Giant Panda Bear come from? Let's look at the evidence and investigate!

Use the [PowerPoint presentation A Tale of Two Pandas](#) to review the scientific evidence. Then, record the evidence in the chart below. Does the evidence support the Red Panda or the Bear? You decide!

Evidence	Description of Evidence	Which claim does this support? <b>Bear family</b> OR Red Pandas / Raccoon family	Scientific Reasoning - why would they be more closely related or share a more recent common ancestor?
<b>Evidence 1: Behavior</b>  Giant Panda and Red Panda both live in bamboo forests.	The diet of the red panda and giant panda is similar. The giant panda ONLY eats bamboo, while the red panda eats mostly bamboo. The raccoon does not eat bamboo, it mainly eats fruits and small insects, and its habitat is in North America.	More closely related to <b>Red Panda / raccoon family</b>	Because the red panda and giant panda share a habitat and diet, they are more closely related and share a more recent common ancestor.
