Tomorrows World Energy:

Tomorrow's World Duncan McLaren, Dr Duncan Bullock McLaren (Simon Yousuf, Nusrat), Simon Bullock, Nusrat Yousuf, 2013-11-05 This title uses the concept of environmental space to resolve many of the issues facing us in the future and applies the lessons specifically to the UK. Believing that we occupy more environmental space than the world can afford, this book seeks to explain what we can do to live comfortably within what we actually have through efficiency and sufficiency. In addition, it aims to present the sustainable levels of consumption for Britain as targets for government, industry, and households, as well as an idea of how to achieve them.

Global Warming John T. Houghton, 1997-09-18 The best briefing on global warming the student or interested general reader could wish for.

Retrofitting Cities for Tomorrow's World Malcolm Eames, Tim Dixon, Miriam Hunt, Simon Lannon, 2017-09-06 A groundbreaking exploration of the most promising new ideas for creating the sustainable cities of tomorrow. The culmination of a four-year collaborative research project undertaken by leading UK universities in partnership with city authorities, prominent architecture firms, and major international consultants, *Retrofitting Cities for Tomorrow's World* explores the theoretical and practical aspects of the transition towards sustainability in the built environment that will occur in the years ahead. The emphasis throughout is on emerging systems, innovations, and bold new ways of imagining and re-imagining urban retrofitting set within the context of futures-based thinking. The concept of urban retrofitting has gained prominence within both the research and policy arenas in recent years. While cities are often viewed as a source of environmental stress and resource depletion, they are also hubs of learning and innovation, offering enormous potential for scaling up technological responses. But city-level action will require a major shift in thinking and a scaling up of positive responses to climate change and the associated threats of environmental and social degradation. Clearly, the time has come for a more coordinated, planned, and strategic approach that will allow cities to transition to a sustainable future. This book summarizes many of the best new ideas currently in play on how to achieve those goals. Reviews the most promising ideas for how to approach planning and coordinating a more sustainable urban future by 2050 through retrofitting existing structures. Explores how cities need to govern for urban retrofit and how future urban transitions and pathways can be managed, modeled, and navigated. Offers interdisciplinary insights from international contributors from both the academic and professional spheres. Develops a rigorous conceptual framework for analyzing existing challenges and fostering innovative ways of addressing those challenges. *Retrofitting Cities for Tomorrow's World* is must reading for academic researchers including postgraduates, insustainability, urban planning, environmental studies, economics, among other fields. It is also an important source of fresh ideas and inspiration for town planners, developers, policy advisors, and consultants working within the field of sustainability, energy, and the urban environment.
