Measure Theory and Fine Properties of Functions, Revised Edition Lawrence C. Evans, 2015-04-17 This book emphasizes the roles of Hausdorff measure and the capacity in characterizing the fine properties of sets and functions The book covers theorems and differentiation in \mathbb{R}^n Hausdorff measures area and coarea formulas for Lipschitz mappings and related change of variable formulas and Sobolev functions and functions of bounded variation This second edition includes countless improvements in notation format and clarity of exposition Also new are several sections describing the p theorem weak compactness criteria in L^1 and Young measure methods for weak convergence In addition the bibliography has been updated

Lectures on the Theory of Elliptic Functions Harris Hancock, 2004-01-01 Prized for its extensive coverage of classical material this text is also well regarded for its unusual fullness of treatment and its comprehensive discussion of both theory and applications The author develops the theory of elliptic integrals beginning with formulas establishing the existence formation and treatment of all three types and concluding with the most general description of these integrals in terms of the Riemann surface The theories of Legendre Abel Jacobi and Weierstrass are developed individually and correlated with the universal laws of Riemann The important contributory theorems of Hermite and Liouville are also fully developed 1910 ed

An Introduction to the Theory of Stationary Random Functions A. M. Yaglom, 2004-01-01 This two part treatment covers the general theory of stationary random functions and the Wiener Kolmogorov theory of extrapolation and interpolation of random sequences and processes Beginning with the simplest concepts it covers the correlation function the ergodic theorem homogenous random fields and general rational spectral densities among other topics Numerous examples appear throughout the text with emphasis on the physical meaning of mathematical concepts Although rigorous in its treatment this is essentially an introduction and the sole prerequisites are a rudimentary knowledge of probability and complex variable theory 1962 edition

This book provides a detailed examination of the central assertions of measure theory in n dimensional Euclidean space and emphasizes the roles of Hausdorff measure and the capacity in characterizing the fine properties of sets and functions Topics covered include a quick review of abstract measure theory theorems and differentiation in \mathbb{M}^n lower Hausdorff measures area and coarea formulas for Lipschitz mappings and related change of variable formulas and Sobolev functions and

functions of bounded variation The text provides complete proofs of many key results omitted from other books including Besicovitch's Covering Theorem Rademacher's Theorem on the differentiability a.e. of Lipschitz functions the Area and Coarea Formulas the precise structure of Sobolev and BV functions the precise structure of sets of finite perimeter and Alexandro's Theorem on the twice differentiability a.e. of convex functions Topics are carefully selected and the proofs succinct but complete which makes this book ideal reading for applied mathematicians and graduate students in applied mathematics
