To Err Is Human Building A Safer Health System:

To Err Is Human Institute of Medicine, Committee on Quality of Health Care in America, 2000-04-01 Experts estimate that as many as 98 000 people die in any given year from medical errors that occur in hospitals That s more than die from motor vehicle accidents breast cancer or AIDS three causes that receive far more public attention Indeed more people die annually from medication errors than from workplace injuries Add the financial cost to the human tragedy and medical error easily rises to the top ranks of urgent widespread public problems *To Err Is Human* breaks the silence that has surrounded medical errors and their consequence but not by pointing fingers at caring health care professionals who make honest mistakes After all to err is human Instead this book sets forth a national agenda with state and local implications for reducing medical errors and improving patient safety through the design of a safer health system This volume reveals the often startling statistics of medical error and the disparity between the incidence of error and public perception of it given many patients expectations that the medical profession always performs perfectly A careful examination is made of how the surrounding forces of legislation regulation and market activity influence the quality of care provided by health care organizations and then looks at their handling of medical mistakes Using a detailed case study the book reviews the current understanding of why these mistakes happen A key theme is that legitimate liability concerns discourage reporting of errors which begs the question How can we learn from our mistakes Balancing regulatory versus market based initiatives and public versus private efforts the Institute of Medicine presents wide ranging recommendations for improving patient safety in the areas of leadership improved data collection and analysis and development of effective systems at the level of direct patient care *To Err Is Human* asserts that the problem is not bad people in health care it is that good people are working in bad systems that need to be made safer Comprehensive and straightforward this book offers a clear prescription for raising the level of patient safety in American health care It also explains how patients themselves can influence the quality of care that they receive once they check into the hospital This book will be vitally important to federal state and local health policy makers and regulators health professional licensing officials hospital administrators medical educators and students health caregivers health journalists patient advocates as well as patients themselves First in a series of publications from the Quality of Health Care in America a project initiated by the Institute of Medicine

To Err is Human , Health Care System at Odds with Itself The Quality of Health Care in America Committee of the Institute of Medicine IOM concluded that it is not acceptable for patients to be harmed by the health More commonly errors are caused by faulty systems processes and conditions that lead people to make mistakes or fail to prevent them Funding for the center should be adequate and secure starting with 30 million to 35 million per year and growing over time to at least 100 million an nually modest investments relative to the consequences of errors and to the re sources devoted to other public safety issues The center should be housed within the Agency for Healthcare Research and Quality AHRQ which already is in volved in a broad range of quality and safety issues

and has established the infra structure and experience to fund research education and coordinating activities Supporting new and established multidisciplinary teams of researchers and health care facilities and organizations located in geographically diverse locations that will further determine the causes of medical errors and develop new knowledge that will aid the work of the demonstration projects The views presented in this report are those of the Institute of Medicine Committee on the Quality of Health Care in America and are not necessarily those of the funding agencies To Err is Human.
