Southern Albatross:

Southern Albatrosses and Petrels Peter C. Harper, F. C. Kinsky, 1978 Following the international success of their 1974 identification guide to the albatrosses and petrels of New Zealand two leading authorities on marine birds Peter C Harper and F C Kinsky have revised and expanded their previous text to present a new edition which describes all species of albatrosses and petrels likely to be seen in the southern oceans from the Tropic of Capricorn south to the shores of Antarctica Popular features of the previous guide have been combined with improvements to create a definitive easy to use booklet for scientists and laymen alike

Albatrosses Terence Lindsey, 2008-06-22 Most albatrosses range across the Southern Hemisphere from Antarctica to Australia and from South Africa to South America The ferocious air encircling Antarctica is an impossible place for almost all non aquatic animals but not for the albatross The most distinctive characteristic of albatrosses is that they ride storms They do not evade storms or flee them but climb aboard and ride them effectively throughout their lives Aside from a few close relatives among the petrels and shearwaters they are the only animals that do this Albatrosses outlines the life histories of these spectacular birds and explores some of the main strategies that have evolved to enable them to achieve mastery of one of the most hostile regions on the planet Complemented by stunning photographs taken from remote locations this book will be treasured by natural history and bird enthusiasts
