Soviet X Planes:

Soviet X-planes E. Gordon, Yefim Gordon, Bill Sweetman, 1992 Detailed review of Soviet experimental aircraft from the early 1900s to the latest Russian prototypes of today Describes about 150 aircraft types each with relevant data including many three view drawings Soviet V/STOL Aircraft Michael J. Hirschberg, 1997 This important case study reports on the V STOL development activities in the Soviet Union As in the West the Soviets also began using flying test rigs in the late 1950s By combining the lift engines with modifications to existing engines the Soviets were able to deploy the Yak 38 Forger only two years after the Harrier The Forger was in service for 15 years before the political situation forced its retirement from service Packed with illustrations references glossaries and bibliographies this case study is a necessary resource for the studies of V STOL aircraft and systems designers **Soviet and Russian Lunar Exploration** Brian Harvey, 2007-08-17 When in July 1969 the Americans decisively beat the Soviet Union in the race to put an astronaut on the moon this event had profound historical scientific and political implications This book tells the story of the Soviet and Russian lunar programme from its origins to the reconsideration of a lunar programme in the present day federal Russian space programme Following Sputnik the first Soviet lunar flights achieved the key goals of hitting circling and photographing the moon in 1959 The Soviet Union planned to achieve the biggest prize of them all the first person to land on the moon and built all the key spaceships required to do so such as a lunar orbiter and lander Brian Harvey describes the techniques devised by the USSR for lunar landing from the LK lunar module to the LOK lunar orbiter and tested versions in Earth orbit He asks whether these systems would have worked and examining how well they were tested concludes that they would have the Soviet Union lost the moon race for political not technical reasons Designs for moon bases were even drawn up In the end the Soviet Union ran an impressive series of robotic missions from 1968 to 1976 to circle the moon map the far side conduct scientific observations from orbit recover samples and rove over the surface The scientific haul from these missions is surveyed what was actually learned about the moon its rocks and the lunar environment that will be useful for the present plans by the United States to return to the moon and for other countries such as India and China to conduct their own lunar exploration The book opens in Surgut Siberia in August 1976 with a largely forgotten event the return to Earth after a three day journey from the moon under a single parachute of the tiny Luna 24 cabin with a core sample drilled deep into the Sea of Crises a remarkable scientific and engineering achievement It ends with an examination of projected missions from plans to explore the far side and set up lunar observatories to the Luna Glob explorer of the 1990s There is also discussion of lunar tourism using a modernized version of the Zond spacecraft which flew around the moon from 1968 to 1970 Technology and the Air Force: A Retrospective Assessment , Re-entry Systems Erwin Mooij, 2024-12-25 This book explains and describes re entry systems for both the Earth and other planets It provides sufficient information for readers to perform entry mission analysis for different bodies in the Solar System Not only does it discuss re entry flight mechanics but also addresses relevant

subsystems and fields enabling readers to put the information into perspective The book begins with a complete description of planetary environments including atmosphere gravity fields and the shape of the primary body After a detailed discussion of planar flight mechanics it then moves on to discuss guidance navigation and control entry descent and landing systems as well as thermal protection systems It uses examples throughout the text enabling the theory to be linked to practical applications Ideal for those wanting an updated thorough discussion of re entry systems this book is suitable for students and researchers

Technology and the Air Force Jacob Neufeld,2009-06 Proceedings of a symposium co sponsored by the Air Force Historical Foundation and the Air Force History and Museums Program The symposium covered relevant Air Force technologies ranging from the turbo jet revolution of the 1930s to the stealth revolution of the 1990s Illustrations Soviet Secret Projects Tony Buttler,Yefim Gordon,2004 Among the best selling aviation titles of recent years have been Midland s Lutwaffe and British Secret Projects series Soviet secret projects now come under the spotlight This first volume covers bomber concepts from the various design bureaus from the 1940s onwards Many unusual and sophisticated aircraft are featured in these pages allowing comparisons between what the Soviets were working on and what was being produced in the West during that period Secret Wings of World War II Lance Cole,2015-06-30 There are many myths and legends surrounding the advanced German aeronautical technology of the Second World War There are also facts and proven events Yet within these stories and behind these facts lie conspiracy theories mistaken assumptions and denials that seem to contradict the evidence So what really happened How far ahead were the German scientists And of even greater interest why and how There have been other books about advanced German wartime aeronautics yet few authors have fully examined the detail of the designs and their relevance to the fighter and bomber legends of the 1950s and 60s let alone the current crop of military and civil all wing or blended wing aircraft This book charts the story from it origins through current day innovations and beyond into the all wing future of tomorrow
