Tan Van, 2020 A new era of space exploration is coming to the United States In the past only a small subset of people had the means to conduct space activities governmental organizations military and large private companies Space is a market that

has mostly been untapped for its potential due to the high launch costs and the technical complexity of launching and operating in space. However, as space becomes more accessible to the public, there is growing interest in space exploration and more specifically space tourism. Technology is maturing to a point where space travel is feasible and critical for the continuation of humankind. Companies are energetically developing mechanisms for private citizens to travel through and live in space. Their motives range from pure curiosity to explore the unknown to a desire to advance and expand the capabilities of the human race to using space as another avenue for revenue and profit. As launch costs decrease and space technology advances, the cost of traveling to space will reach a point where space travel will become affordable to a broader group of people. With a significant influx in people traveling to and through space, the United States will have to develop proper regulations and policies for this new venture. Additionally, the government must posture and prepare itself to be able to enforce these rules. As a space tourism industry advances closer to reality with the numerous and sometimes complex and ill-defined treaties, regulations, and policies regarding commercial space travel, the space tourism industry will significantly benefit from having one clearly defined overarching regulation. The rest of this paper will first present an overview of the concept of space tourism, its importance, and a brief history. Then a summary of the most credible pioneers of the space tourism industry, their accomplishments, and plans will show how quickly the space tourism industry is progressing. The paper will address the various treaties, policies, and laws affecting space and space tourism, along with potential involvement of the United States Space Force or another enforcement-like entity to protect American property and interest. Finally, the paper will highlight some of the regulatory concerns related to space tourism, especially in the area of liability, certification, and safety, and conclude with recommendations.
