Sustainable Energy Access Planning Ram M. Shrestha, Jiwan S. Acharya, 2015-06-01 Sustainable energy access planning unlike traditional energy planning gives primary importance to the energy demand of both poor and nonpoor households the need to make cleaner energy services more affordable to the poor the costs of both supply side and demand side access options and the sustainability of technology and resource options As such this type of energy planning contributes to low carbon development and achievement of Sustainable Energy for All objectives This report presents a framework for sustainable energy access planning that planners and policy makers can use to design cost effective clean energy supply systems that both poor and nonpoor can sustainably access to meet at least the minimum amount of energy for their basic needs The report discusses the multidimensional assessments

involved in this type of planning as well as their interlinkages and implementation issues

**A Framework for State-level Renewable Energy Market Potential Studies** Claire Kreycik, 2010 State level policymakers are relying on estimates of the market potential for renewable energy resources as they set goals and develop policies to accelerate the development of these resources Therefore accuracy of such estimates should be understood and possibly improved to appropriately support these decisions This document provides a framework and next steps for state officials who require estimates of renewable energy market potential The report gives insight into how to conduct a market potential study including what supporting data are needed and what types of assumptions need to be made The report distinguishes between goal oriented studies and other types of studies and explains the benefits of each
