

HEAT AND URBAN ENVIRONMENTAL ISSUES AIR POLLUTION

OVERVIEW

According to the Ambient Air Pollution database of the World Health Organization (WHO), almost nine out of ten people living in urban areas are affected by air pollution. Globally, air pollution is already a well-known public health risk factor; exposure to air pollution is the ninth leading risk for mortality worldwide, and it is responsible for 4.2 million deaths each year. Approximately 91 percent of these premature deaths occur in low- and middle-income countries, with the greatest number in South, East, and Southeast Asia. This risk is greater in urban areas where air quality is generally lower due to greater transportation, industrial and commercial emissions (e.g., road transport, power plants, fuel combustion, etc.). There is concern that climate variability and change could affect the morbidity and mortality associated with elevated concentrations of air pollutants, especially particulate matter (PM). (1, 18, 27, 30, 42)

Source: AIE, 2011

Over the past 50 years, hot days, hot nights, and heatwaves have become more frequent. Global average temperatures are expected to increase significantly by the 2050s, with particularly large increases in cities. Among the most vulnerable are developing countries in the tropics, where projections for warming temperatures in urban areas will likely influence and increase air pollution levels, dispersion and concentration. (32)

Key Impacts

PM

PARTICULATE MATTER (PM₁₀, PM_{2.5})

Sunlight increases the formation of PM
Increased absorption of radiation
Poses the greatest risks to human health

NO₂

NITROGEN DIOXIDE

Increased heat and sunlight lead to higher NO₂
Exacerbates asthma and bronchitis symptoms
Increases the risk of heart attack

SO₂

SULFUR DIOXIDE

Increased heat increases SO₂ levels
Increases the risk of hospitalization and death due to COPD, heart attacks and asthma

O₃

GROUND-LEVEL OZONE

Increased heat and sunlight increases ozone
Increases hospitalizations and deaths due to COPD and asthma

February 2020

This document was prepared under the Adaptation Thought Leadership and Assessments (ATLAS) Task Order No. AID-OAA-L14-00013 and is meant to provide a brief overview of heat's effect on urban environmental issues. The key resources at the end of the document provide more in-depth analysis. The contents of this report do not necessarily reflect the views of USAID.
