Climate Change, Ozone Depletion and Air Pollution Alexander Gillespie, 2005-09-01 This book offers a principal collection of all of the material necessary to understand the legal debates on climate change, ozone depletion, and air pollution within their scientific and policy contexts. The mountain of information coming out of the respective regimes on climate change, ozone depletion, and air pollution is monumental. This work attempts to assemble all of the important documents and resolutions generated by the various regimes, analyze them, and provide enough background information to understand the issue and its context. Managing Energy Security Maria G. Burns, 2019-03-29 This interdisciplinary book is written for government and industry professionals who need a comprehensive, accessible guide to modern energy security. Introducing the ten predominant energy types, both renewable and non-renewable, the book illustrates the modern energy landscape from a geopolitical, commercial, economic, and technological perspective. Energy is presented as the powerhouse of global economic activities. To ensure the uninterrupted supply of energy, nations, industries, and consumers need to have options. Efficient energy security planning ensures that when a primary energy source is depleted, compromised, or interrupted, an alternative energy source must be readily available. For this reason, the foundations of energy security are built upon the five pillars of Sustainability: Independence, Efficiency, Affordability, and Accessibility. The numerous case studies presented in this book demonstrate that energy security may be compromised in the absence of one out of these five ingredients. The book also entertains the Triple E

notion of Energy Efficiency Environmental integrity and Economies of scale used by governments and corporations for energy optimization One of the key strengths of the book is its ability effectively to cover various scientific disciplines and several energy types while remaining comprehensible This book will be of much interest to security or logistics professionals economists and engineers as well as policymakers

The Switch Chris Goodall,2016-07-07 How will the world be powered in ten years time Not by fossil fuels Energy experts are all saying the same thing solar photovoltaics PV is our future Reports from universities investment banks international institutions and large investors agree It s not about whether the switch from fossil fuels to solar power will happen but when Solar panels are being made that will last longer than ever hoped investors are seeing the benefits of the long term rewards provided by investing in solar in the Middle East a contractor can now offer solar powered electricity far cheaper than that of a coal fired power station The Switch tracks the transition away from coal oil and gas to a world in which the limitless energy of the sun provides much of the energy the 10 billion people of this planet will need It examines both the solar future and how we will get there and the ways in which we will provide stored power when the sun isn t shining We learn about artificial photosynthesis from a start up in the US that is making petrol from just CO2 and sunlight ideas on energy storage are drawn from a company in Germany that makes batteries for homes in the UK a small company in Swindon has the story of wind turbines and in Switzerland a developer shows how we can use hydrogen to make renewable natural gas for heating Told through the stories of entrepreneurs inventors and scientists from around the world and using the latest research and studies The Switch provides a positive solution to the climate change crisis and looks to a brighter future ahead
