Geoscience Information A.P. Harvey,2012-12-06 The International Conference on Geological Information represents the first major attempt to bring together geoscience information specialists from allover the world The purpose of the conference was to assess the current state of the art in geoscience information from both the regional and functional point of view It was hoped that the conference could take steps to bring about increased international cooperation and collaboration in the field of geological information The papers ranged over the whole spec trum of documentation from primary publishing back to the user including data Perhaps a keyword for the conference might be cooperation The idea of and need for cooperation was stressed in almost every talk The final panel session was devoted to a discussion on the formation of a proposed International Association for Geological Information Despite the growing pressure on information managers stimulated by increasing international activities in geology the global perspective of plate tectonics and worldwide concern for the availability of non renewable resources there does not exist an international organisation specifi cally concerned with geological information Delegates agreed that there was no need for a new professional society of individuals but that a federation or similar organisation might be desirable In the final session it became apparent that if the geological information community is to make the best use of all the systems and developments available there is very clearly a need to know what exists in all these areas at present An urgent task is to identify these systems      *The Chronologers' Quest* Patrick Wyse Jackson,2006-08-17

The debate over the age of the Earth has been ongoing for over two thousand years and has pitted physicists and astronomers against biologists and religious philosophers against geologists The Chronologers Quest tells the fascinating story of our attempts to determine the age of the Earth This book investigates the many novel methods used in the search for the Earth s age from James Ussher and John Lightfoot examining biblical chronologies and from Comte de Buffon and Lord Kelvin determining the length of time for the cooling of the Earth to the more recent investigations of Arthur Holmes and Clair Patterson into radioactive dating of rocks and meteorites The Chronologers Quest is a readable account of the measurement of geological time It will be of great interest to a wide range of readers from those with little scientific background to students and scientists in a wide range of the Earth sciences      *Geological Survey Bulletin* ,1949      *Catalog of the United States Geological Survey Library* U.S. Geological Survey Library,1974      **A History of Modern Planetary Physics** Stephen G. Brush,1996-04-26 Where did we come from Before there was life there had to be something to live on a planet a solar system During the past 200 years astronomers and geologists have developed and tested several different

theories about the origin of the solar system and the nature of the Earth Did the Earth and other planets form as a by product of a natural process that formed the Sun Did the solar system come into being as the result of catastrophic encounter of two stars Is the inside of the Earth solid liquid or gaseous The three volumes that make up A History of Modern Planetary Physics present a survey of these theories Nebulous Earth follows the development of the nineteenth century s most popular explanation for the origin of the solar system Laplace s Nebular Hypothesis This theory supposes that a flattened mass of gas extending beyond Neptune s orbit cooled and shrank throwing off in the process successive rings that in time coalesced to form several planets
