Surveys In Combinatorics 2003:

Surveys in Combinatorics 2003 C. D. Wensley, 2003-07-24 The British Combinatorial Conference is held every two years and is a key event for mathematicians worldwide working in combinatorics In June 2003 the conference was held at the University of Wales Bangor The papers contained here are surveys contributed by the invited speakers and are of the high quality that befits the event There is also a tribute to Bill Tutte who had a long standing association with the BCC The papers cover topics currently attracting significant research interest as well as some less traditional areas such as the combinatorics of protecting digital content They will form an excellent resource for established researchers as well as graduate students who will find much here to inspire future work

Triangulated Categories Thorsten Holm, Peter Jørgensen, Raphaël Rouquier, 2010-06-24 Over the last few decades triangulated categories have become increasingly important to the extent that they can now be viewed as a unifying theory underlying major parts of modern mathematics This 2010 collection of survey articles written by leading experts covers fundamental aspects of triangulated categories as well as applications in algebraic geometry representation theory commutative algebra microlocal analysis and algebraic topology These self contained articles are a useful introduction for graduate students entering the field and a valuable reference for experts

Differential Tensor Algebras and Their Module Categories R. Bautista, L. Salmerón, R. Zuazua, 2009-09-17 A detailed account of main results in the theory of differential tensor algebras

Automorphic Forms and Galois Representations Fred Diamond, Payman L. Kassaei, Minhyong Kim, 2014-10-16 Part two of a two volume collection exploring recent developments in number theory related to automorphic forms and Galois representations

Automorphisms and Equivalence Relations in Topological Dynamics David B. Ellis, Robert Ellis, 2014-06-05 Focusing on the role that automorphisms and equivalence relations play in the algebraic theory of minimal sets provides an original treatment of some key aspects of abstract topological dynamics Such an approach is presented in this lucid and self contained book leading to simpler proofs of classical results as well as providing motivation for further study Minimal flows on compact Hausdorff spaces are studied as icers on the universal minimal flow M The group of the icer representing a minimal flow is defined as a subgroup of the automorphism group G of M and icers are constructed explicitly as relative products using subgroups of G Many classical results are then obtained by examining the structure of the icers on M including a proof of the Furstenberg structure theorem for distal extensions This book is designed as both a guide for graduate students and a source of interesting new ideas for researchers

Lectures on the Theory of Water Waves Thomas J. Bridges, Mark D. Groves, David P. Nicholls, 2016-02-04 A range of experts contribute introductory level lectures on active topics in the theory of water waves

Geometric and Cohomological Methods in Group Theory Martin R. Bridson, 2009-10-29 An extended tour through a selection of the most important trends in modern geometric group theory
