The Power Of Maps:

The Power of Maps Denis Wood, John Fels, 1992-01-01 This volume ventures into terrain where even the most sophisticated map fails to lead through the mapmaker's bias Denis Wood shows how maps are not impartial reference objects but rather instruments of communication persuasion and power Like paintings they express a point of view By connecting us to a reality that could not exist in the absence of maps a world of property lines and voting rights taxation districts and enterprise zones they embody and project the interests of their creators Sampling the scope of maps available today illustrations include Peter Gould's AIDS map Tom Van Sant's map of the earth U S Geological Survey maps and a child's drawing of the world THE POWER OF MAPS was published in conjunction with an exhibition at the Cooper Hewitt Museum the Smithsonian Institution's National Museum of Design Rethinking the Power of Maps Denis Wood, 2010-04-16 A contemporary follow up to the groundbreaking Power of Maps this book takes a fresh look at what maps do whose interests they serve and how they can be used in surprising creative and radical ways Denis Wood describes how cartography facilitated the rise of the modern state and how maps continue to embody and project the interests of their creators He demystifies the hidden assumptions of mapmaking and explores the promises and limitations of diverse counter mapping practices today Thought provoking illustrations include U S Geological Survey maps electoral and transportation maps and numerous examples of critical cartography participatory GIS and map art

The power of maps Denis Wood, 1993 *The Algebra of Secondary Cohomology Operations* Hans-Joachim Baues, 2006-06-12 The algebra of primary cohomology operations computed by the well known Steenrod algebra is one of the most powerful tools of algebraic topology This book computes the algebra of secondary cohomology operations which enriches the structure of the Steenrod algebra in a new and unexpected way The book solves a long standing problem on the algebra of secondary cohomology operations by developing a new algebraic theory of such operations The results have strong impact on the Adams spectral sequence and

hence on the computation of homotopy groups of spheres

The Power of Projections Arthur Jay Klinghoffer,2006-04-30 Why is Europe at the top half of maps and Africa at the bottom Although we are accustomed to that convention it is in fact a politically motivated almost entirely subjective way of depicting a ball spinning in space As The Power of Projections teaches us maps do not portray reality only interpretations of it To begin with they are two dimensional projections of a three dimensional spherical Earth Add to that the fact that every map is made for a purpose and its design tends to reflect that purpose Finally a map is often a psychological projection of the historical political and cultural values of the cartographer or of the nation person or organization for which the map was created In this fascinating book Klinghoffer examines the world perceptions of various civilizations and the ways in which maps have been formulated to serve the agendas of cartographers and their patrons He analyzes the recent decline of sovereignty the spread of globalization the reassertion of ethnic identity and how these trends affect contemporary mapmaking
