The Semantic Web - ISWC 2008 Amit P. Sheth, Steffen Staab, Massimo Paolucci, Diana Maynard, Timothy Finin, Krishnaprasad Thirunarayan, 2008-10-21 The Web is a global information space consisting of linked documents and linked data As the Web continues to grow and new technologies modes of interaction and applications are being developed the task of the Semantic Web is to unlock the power of

information available on the Web into a common semantic information space and to make it available for sharing and processing by automated tools as well as by people. Right now the publication of large datasets on the Web, the opening of data access interfaces and the encoding of the semantics of the data extend the current human-centric Web. Now the Semantic Web community is tackling the challenges of how to create and manage Semantic Web content, how to make Semantic Web applications robust and scalable and how to organize and integrate information from different sources for novel uses. To foster the exchange of ideas and collaboration, the International Semantic Web Conference brings together researchers and practitioners in relevant disciplines such as artificial intelligence, databases, social networks, distributed computing, Web engineering, information systems, natural language processing, software computing and human-computer interaction. This volume contains the main proceedings of ISWC 2008, which we are cited to offer to the growing community of researchers and practitioners of the Semantic Web. We got a tremendous response to our call for research papers from a truly international community of researchers and practitioners from 41 countries, submitting 261 papers. Each paper received an average of 3

Geochemical Modelling of Igneous Processes - Principles And Recipes in R Language Vojtěch

Janoušek, Jean-François Moyen, Hervé Martin, Vojtěch Erban, Colin Farrow, 2015-09-10. The aim of this book is to unlock the power of the free software R language to advanced university students and researchers dealing with whole rock geochemistry of meta-igneous rocks. The first part covers data input/output, calculation of commonly used indexes and plotting in R. The core of the book then focusses on the presentation and practical implementations of modelling techniques used for fingerprinting processes such as partial melting, fractional crystallization, binary mixing or AFC using major trace element and radiogenic isotope data. The reader will be given a firm theoretical basis for forward/reverse modelling followed by exercises dealing with typical problems likely to be encountered in real life and their solutions using R. The concluding sections demonstrate using practical examples how a researcher can proceed in developing a realistic model simulating natural systems. The appendices outline the fundamentals of the R language and provide a quick introduction to the open source R package GCDkit for interpretation of whole rock geochemical data from igneous and metamorphic rocks. **Oregon Law Review**
