Spectrochemical Analysis by X-Ray Fluorescence Rudolf Muller, 2012-12-06 In recent years the x ray fluorescence technique has become increasingly important in modern analysis and production control it can be classified as a spectroscopical method for the determination of the elemental composition Many articles treat this method however there exists no modern textbook suitable for the beginner as well as the practitioner and theoretician In this monograph the author intends to fill this need to present the principles of x ray fluorescence analysis and to develop a theoretical understanding of the technique Both principles and theory will be treated extensively for they are the basis for successful practical application of the method X ray fluorescence on the other hand is often carried out exclusively because of its practical usefulness For this reason theoretical investigations are used exclusively as a basis for practical work and the multitude of applications which constitute the value of the x ray fluorescence method will be explained on the basis of simple theory The idea to write this monograph originated and developed when efforts to train coworkers required a more complete treatise I would like to thank the elBA Aktiengesellschaft in Basel where this work originated for generous support and permission to publish the book The head of the Physics Department Dr E Ganz and my colleagues have contributed to this book by providing a stimulating working atmosphere I am grateful to my associates in particular Messrs E Eng S Gasser and H R
