**Spectrometry of Fuels** R. A. Friedel, 2012-12-06 Fuels represent an important aspect of world economy The study of the chemical properties and compositions of fuels is necessary to provide a better understanding of their reactions and possibly to promote their improved commercial utilization Spectrometry comprises a valuable group of tools and techniques for the study of fuels and their derivatives Some of the undesirable by products from fuels specifically pollutants provide the spectroscopist with an additional vast area for the application of his tools The fight against pollution of all kinds has spawned one of our most rapidly growing industries It thus seems pertinent to devote a book to the spectrometric investigation of fuels and related materials This book is intended to be of interest to people concerned with fuels with related chemicals with applications of the newest spectral methods or with organic and physical chemistry The purpose of the book is threefold 1 To give details of 23 new researches using modern spectral methods on fuels and related materials 2 to give the reader some feeling for these modern techniques and their applications and 3 to provide him with indications of material for further reading The book is not intended to cover details of specific analyses of fuels or of fuel derivatives such as gasoline lubricating oil coal gas etc considerable space in other books and in journals has been devoted to these subjects

**Hydrocarbon-Type Analysis of Jet Fuel with Gas Chromatography/Mass Spectrometry** M.J. Gehron, R.A. Yost, 1989 A gas chromatography mass spectrometry hydrocarbon type analysis GC MS HTA method has been developed for the analysis of jet fuels The method employs a short column 3 m by 0.25 mm inside diameter by 1.0 mm thick film DB 5 capillary for sample introduction into the mass spectrometer The calculational aspects of the technique are based on the current ASTM Test Method for Hydrocarbon Types in Low Olefinic Gasoline by Mass Spectrometry D 2789-86 inverse calibration matrices An evaluation of component discrimination with GC introduction was performed as a function of injection port temperatures and injection methods The analytical figures of merit such as sensitivity and limit of detection were determined Comparisons between the GC MS HTA and ASTM D 2789-86 results of several test fuels were made Additionally several synthetically prepared fuels were analyzed by the GC MS HTA method in order to evaluate the accuracy of the method

**Springer Handbook of Petroleum Technology** Chang Samuel Hsu,Paul R. Robinson,2017-12-20 This handbook provides a comprehensive but concise reference resource for the vast field of petroleum technology Built on the successful book Practical Advances in Petroleum Processing published in 2006 it has been extensively revised and expanded to include upstream technologies The book is divided into four parts The first part on petroleum characterization offers an in depth review of the chemical composition and physical properties of petroleum which determine the possible uses and the quality of the products The second part provides a brief overview of petroleum geology and upstream practices The third part exhaustively discusses established and emerging refining technologies from a practical perspective while the final part describes the production of various refining products including fuels and lubricants as well as petrochemicals such as olefins and polymers It also covers process automation and real time refinery wide process optimization Two key chapters provide an integrated view of petroleum technology including environmental and safety issues Written by international experts from academia industry and research institutions including integrated oil companies catalyst suppliers licensors and consultants it is an invaluable resource for researchers and graduate students as well as practitioners and professionals

*Catalytic In-Situ Upgrading of Heavy and Extra-Heavy Crude Oils* Mikhail A. Varfolomeev,Chengdong Yuan,Jorge Ancheyta,2023-06-12 Catalytic In Situ Upgrading of Heavy and Extra Heavy Crude Oils A comprehensive guide to a cutting edge and cost effective refinement process for heavy oil Oil sufficiently viscous that it cannot flow normally from production wells is called heavy oil and constitutes as much as 70% of global oil reserves Extracting and refining this oil can pose significant challenges including very high transportation costs As a result processes which produce and partially refine heavy oil in situ known as catalytic upgrading are an increasingly important part of the heavy oil extraction process and the reduced carbon footprint associated with these methods promises to make them even more significant in the coming years Catalytic In Situ Upgrading

of Heavy and Extra Heavy Crude Oils provides a comprehensive introduction to these processes. It introduces the properties and characteristics of heavy and extra heavy oil before discussing different catalysts and catalyzing processes, their mechanisms and underlying physics, and more. It offers the full sweep of description and analysis required for petroleum and chemical engineers to understand this vital aspect of the modern oil industry. Readers will also find detailed discussion of subjects including electron paramagnetic resonance spectroscopy, nuclear magnetic resonance spectroscopy, and more. Analysis of both liquid catalysts and nanoparticle catalysts. A numerical simulation of the catalytic in situ oil upgrading process. Catalytic In Situ Upgrading of Heavy and Extra Heavy Crude Oils is a valuable reference for petroleum and chemical engineers as well as advanced undergraduate and graduate students in related fields.

*Tandem Mass Spectrometric Analysis (MS/MS) of Jet Fuels. Part 1. Experimental Procedures and Qualitative Data Analysis* Henk L. Meuzelaar, William H. McClennen, GEO-CENTERS INC NEWTON UPPER FALLS MA., 1985. A fast direct mass spectrometry MS determination of hydrocarbon classes in jet fuels is presented. A novel inlet technique using 0.1 mm i.d. micropipet glass capillaries for sampling the liquid fuels and reproducibly placing the 10 to 20 microgram samples in the MS vacuum for analysis is demonstrated. Low voltage electron ionization is shown to produce molecular ion series characteristic of alkyl substituted naphthalenes, tetralins, and decalins. Structurally specific fragment ions for several hydrocarbons as determined by gas chromatography mass spectrometry are used to help identify compound classes by tandem mass spectrometry MS/MS. As discussed, MS/MS can add a dimension of separation to overlapping molecular ion series while maintaining the greater speed of direct MS over GC/MS. In addition, multivariate statistical analysis is demonstrated to be a powerful method for comparison of MS spectra from complex jet fuels to chemical class standards.

Solid Mineral Fuels. Determination of Sulfur by IR Spectrometry British Standards Institute Staff, 2006-10-31. Solid fuels: Coal, Lignite. Fuels: Chemical analysis and testing. Determination of content: Sulfur. Combustion test methods: Spectrophotometry, Infrared radiation. Specimen preparation.

Analysis of Deposit Precursors in Jet Fuels Using Fourier Transform Infrared Spectroscopy David Bryan Shehee, 1991. Thermal oxidation products from jet fuels will be formed in the presence of fuel and oxygen at elevated temperatures. Development of fuels that will not form solid residues depends on the development of a method to analyze the rate of oxidation of fuels. Gravimetric determination of fuel residues was imprecise and time-consuming. Gas Chromatography Mass Spectrometry of oxidation products yields a great deal of fundamental information but is too specific to be used as a rapid method for determining the rate of oxidation. Fourier Transform Infrared Spectrometry is non-specific and gives integrated signals for classes of oxidation products that will give rapid analytical results for rates of oxidation as well as the ability to study the effectiveness of chemical additives.

The Science and Technology of Unconventional Oils M. M. Ramirez-Corredores, 2017-05-18. This book, *The Science and Technology of Unconventional Oils: Finding Refining Opportunities*, intends to report the collective physical and chemical knowledge of unconventional oils: heavy, extra heavy, sour.

acid and shale oil and the issues associated with their refining for the production of transportation fuels It will focus on the discussion of the scientific results and technology activities of the refining of unconventional oils The presence of reactive and refractory compounds and components that negatively impact refining processing the bad actors are discussed and analyzed The commercially available technologies with their reported improvements and emerging ideas concepts and technologies are described This comprehensive overview constitutes the basis for establishing technology gaps and in return sets the science and technology needs to be addressed in the future In summary this book incorporates the relevant knowledge of processing unconventional crude oils and of the Bottom of the Barrel fraction describing the related commercially available and emerging technologies to contribute to the identification of existing gaps Relates physicochemical properties and phenomenological behavior of unconventional oils to refining challenges Describes commercially available technologies and the problems they solve Lists recent improvements in various processes and identifies technology gaps Explains emerging new refining technologies and the problems they solve Discusses future needs and challenges and suggests further research and development needs
