Spectroscopic Analysis of Coal Liquids John R. Kershaw,1989 This book comprehensively and critically reviews the analysis of coal derived liquids by modern spectroscopic techniques All the major techniques used in the analysis of coal liquids are included with detailed chapters on mass infrared ultraviolet and luminescence nuclear magnetic resonance and electron spin resonance spectroscopy Each method is critically evaluated and the limitations and problems that the complexity of typical coal liquids impose on each technique are discussed The book also includes a discussion of solvent fractionation chromatographic separations and the pyrolysis and hydrolysis of coal liquids A detailed review of the composition of coal liquids from various coal liquefaction processes and a brief introduction to coal science are also included This is the only comprehensive coverage of the spectroscopic analysis of coal liquids It also contains a wealth of information on the composition and properties of coal liquids produced from various coal types under a variety of processing conditions These two features alone should make it essential reading for all professionals involved in liquid fuels research

Trace Analysis of Specialty and Electronic Gases William M. Geiger,Mark W. Raynor,2013-07-15 Explores the latest advances and applications of specialty and electronic gas analysis The semiconductor industry depends upon a broad range of instrumental techniques in order to detect and analyze impurities that may be present in specialty and electronic gases including permanent gases water vapor reaction by products and metal species Trace Analysis of Specialty and Electronic Gases draws together all the latest advances in analytical chemistry providing researchers with both the theory and the operating principles of the full spectrum of instrumental techniques available for specialty and electronic gas analysis Moreover the book details the advantages and disadvantages of each technique steering readers away from common pitfalls Featuring contributions from leading analytical

and industrial chemists Trace Analysis of Specialty and Electronic Gases covers a wide range of practical industrial applications The book begins with the historical development of gas analysis and then focuses on particular subjects or techniques such as Metals sampling and ICP MS analysis Improvements in FTIR spectroscopy Water vapor analysis techniques New infrared laser absorption spectroscopy approaches GC MS GC AED and GC ICP MS techniques Gas chromatography columns Atmospheric pressure ionization mass spectrometry Lastly the book examines gas mixtures and standards that are critical for instrument calibration There are also two appendices offering information on fittings and material compatibility With its thorough review of the literature and step by step guidance Trace Analysis of Specialty and Electronic Gases enables researchers to take full advantage of the latest advances in gas analysis Although the book s focus is the semiconductor and electronics industry analytical chemists in other industries facing challenges with such issues as detection selectivity and sensitivity matrix gas interference and materials compatibility will also discover plenty of useful analytical approaches and techniques
