

The background of the top half of the cover is a dark, almost black, space filled with numerous light trails. These trails are primarily in shades of yellow, orange, and red, and they form a complex, swirling pattern that resembles a stylized 'S' or a series of connected loops. The trails vary in thickness and brightness, creating a sense of depth and movement. The overall effect is reminiscent of a long-exposure photograph of a city at night or a satellite view of a celestial body.

Statistics for Linguists David Eddington, 2016-01-14 Linguists with no background in statistics will find this book to be an accessible introduction to statistics Concepts are explained in non technical terms and mathematical formulas are kept to a minimum The book incorporates SPSS which is a statistics package that incorporates a point and click interface rather than complex line commands Step by step instructions are provided for some of the most widely used statistics in linguistics At the same time the concepts behind each procedure are also explained Traditional analyses such as ANOVA and t tests are included in the book but linguistic data is often not amenable to such analyses For this reason non parametric and mixed effects procedures are also introduced

Statistics for Linguistics with R Stefan Thomas Gries, 2013 This book is the revised and extended second edition of *Statistics for Linguistics with R* The comprehensive revision includes new small sections on programming topics that facilitate statistical analysis the addition of a variety of statistical functions readers can apply to their own data and a revision of overview sections on statistical tests and regression modeling The main revision is a complete rewrite of the chapter on multifactorial approaches which now contains sections on linear regression binary and ordinal logistic regression multinomial and Poisson regression and repeated measures ANOVA The revisions are completed by a new visual tool to identify the right statistical test for a given problem and data set

Statistics for Linguistics with R Stefan Th. Gries, 2009-12-15 This book is an introduction to statistics for linguists using the open source software R It is aimed at students and instructors professors with little or no statistical background and is written in a non technical and reader friendly accessible style It first introduces in detail the overall logic underlying quantitative studies exploration hypothesis formulation and operationalization and the notion and meaning of significance tests It then introduces some basics of the software R relevant to statistical data analysis A chapter on descriptive statistics explains how summary statistics for frequencies averages and correlations are generated with R and how they are graphically represented best A chapter on analytical statistics explains how statistical tests are performed in R on the basis of many different linguistic case studies For nearly every single example it is explained what the structure of the test looks like how hypotheses are formulated explored and tested for statistical significance how the results are graphically represented and how one would summarize them in a paper article A chapter on selected multifactorial methods introduces how more complex research

designs can be studied methods for the study of multifactorial frequency data correlations tests for means and binary response data are discussed and exemplified step by step Also the exploratory approach of hierarchical cluster analysis is illustrated in detail The book comes with many exercises boxes with short think breaks and warnings recommendations for further study and answer keys as well as a statistics for linguists newsgroup on the companion website The volume is aimed at beginners on every level of linguistic education undergraduate students graduate students and instructors professors and can be used in any research methods and statistics class for linguists It presupposes no quantitative statistical knowledge whatsoever and unlike most competing books begins at step 1 for every method and explains everything explicitly
