Statistics In Geography A Practical Approach:

Statistics in Geography David Ebdon, 1967

Statistics in Geography David Ebdon, 1984

Intercultural

Communication Martin S. Remland, Tricia S. Jones, Anita Foeman, Bessie L. Lawton, 2023-10-27 In our increasingly globalized world bridging cultural gaps and connecting with people from diverse backgrounds is essential. Students have more opportunities than ever to immerse themselves in foreign settings and it is important to learn positive approaches to take part in these experiences. This new edition of *Intercultural Communication* engages readers interested in developing intercultural competence with the goal of fostering diverse and vibrant communities that coexist peacefully. The authors start by establishing the foundation of competent communication and its integral role in contributing to peaceful communities. From there they delve into how cultural differences relate to the impacts of cultural frames and emotions as well as nonverbal and verbal communication. In the latter half of the book the text comprehensively surveys how culture permeates and influences our lives. It explores how culture shapes the dynamics of our friendships, family relationships, classroom and workplace environments, media perceptions and experiences when visiting cultures different from our own. By understanding the profound effects of these cultural influences, readers are better equipped to fully immerse themselves in different ways of life. Each chapter also provides a collection of boxed examples that deliver both engaging insights and entertaining anecdotes offering ample content for stimulating discussions.

Statistics in Geography David Ebdon, 1978

A Practical Approach

to Sedimentology Roy Lindholm, 2012-12-06 This book is designed for a one semester course in sedimentology taken by advanced undergraduate or graduate students. It gives detailed descriptions of sedimentary features and the analytical methods used to evaluate them and is intended to support and reinforce principles presented in lectures. Discussion of principles and processes is found in complimentary texts such as Leeder's 1982 *Sedimentology: process and product* and selected readings in professional journals. This book is not an exhaustive treatise of laboratory techniques and theory. The subject matter includes topics generally covered in courses entitled *Sedimentology* or *Sedimentation*. Sandstone and carbonate petrography is commonly given in a separate course. Furthermore, this topic is covered in several current texts. For these reasons I have omitted petrographic methods with the exception of those applying to heavy minerals. I have included a rather extensive discussion of heavies because this topic is generally lacking in most modern texts. Every course in sedimentology is highly individualistic and material covered varies with the interests, background and point of view of the instructor. For these reasons some topics presented in this book are not necessarily covered in all courses. Similarly, some instructors may find that their favorite topic is missing. I can only hope that this problem is minimal. Several chapters contain precise exercises to be completed by the student. Some must be done in the classroom where specimens are available for study. Others may be done outside of the classroom.
