Optimization techniques are used to find the values of a set of parameters which maximize or minimize some objective function of interest Such methods have become of great importance in statistics for estimation model fitting etc This text attempts to give a brief introduction to optimization methods and their use in several important areas of

statistics It does not pretend to provide either a complete treatment of optimization techniques or a comprehensive review of their application in statistics such a review would of course require a volume several orders of magnitude larger than this since almost every issue of every statistics journal contains one or other paper which involves the application of an optimization method It is hoped that the text will be useful to students on applied statistics courses and to researchers needing to use optimization techniques in a statistical context Lastly my thanks are due to Bertha Lakey for typing the manuscript
