Intracranial Pressure VIII C.J.J. Avezaat,J.H.M. van Eijndhoven,A.I.R. Maas,J.T.J. Tans,2012-12-06 The pioneering work by Pierre Janny and Nils Lundberg added a new tool to the investigative armamentarium of the neurosurgeon continuous monitoring of intracranial pressure ICP A small group of basic and clinical scientists recognized the importance of this method and in 1972 an International Symposium was organized by Mario Brock in Hannover Germany The workers of the first hour had high expectations and thought that the problem of intracranial hypertension could finally be dealt with The Symposium continued to grow during subsequent meetings in Lund 1974 Groningen 1976 and Williamsburg 1979 However the advent of the modern imaging techniques of CT and MRI have dramatically changed the scene in clinical neurology and neurosurgery These new methods as well as other monitoring techniques have put ICP in its proper place as just one of the many aspects albeit an important one in the management of patients with intracranial space occupying lesions The symposia in Tokyo 1982 Glasgow 1985 and Ann Arbor 1988 confirmed the steady interest in ICP recording both as a research tool and as a clinical method and yielded many new developments in the field of ICP This book comprises the proceedings of the Eighth International Symposium on Intracranial Pressure that was held in Rotterdam The Netherlands from June 16th to 20th 1991

Statistical Decision Theory James Berger,2013-04-17 Decision theory is generally taught in one of two very different ways When of opti taught by theoretical statisticians it tends to be presented as a set of mathematical techniques mality principles together with a collection of various statistical procedures When useful in establishing the optimality taught by applied decision theorists it is usually a course in Bayesian analysis showing how this one decision principle can be applied in various practical situations The original goal I had in writing this book was to find some middle ground I wanted a book which discussed the more theoretical ideas and techniques of decision theory but in a manner that was constantly oriented towards solving statistical problems In particular it seemed crucial to include a discussion of when and why the various decision prin ciples should be used and indeed why decision theory is needed at all This original goal seemed indicated by my philosophical position at the time which can best be described as basically neutral I felt that no one approach to decision theory or statistics was clearly superior to the others and so planned a rather low key and impartial presentation of the competing ideas In the course of writing the book however I turned into a rabid Bayesian There was no single cause for this conversion just a gradual realization that things seemed to ultimately make sense only when looked at from the Bayesian viewpoint *American Men of Science* ,1970 **Quantitative Models for Business Decisions** N.
