Statistics Testing And Defense Acquisition:

Statistics, Testing, and Defense Acquisition National Research Council, Division of Behavioral and Social Sciences and Education, Commission on Behavioral and Social Sciences and Education, Panel on Statistical Methods for Testing and Evaluating Defense Systems, 1999-09-17 The Panel on Statistical Methods for Testing and Evaluating Defense Systems had a broad mandate to examine the use of statistics in conjunction with defense testing This involved examining methods for software testing reliability test planning and estimation validation of modeling and simulation and use of modern techniques for experimental design Given the breadth of these areas including the great variety of applications and special issues that arise making a contribution in each of these areas required that the Panel's work and recommendations be at a relatively general level However a variety of more specific research issues were either brought to the Panel's attention by members of the test and acquisition community e g what was referred to as Dubin's challenge addressed in the Panel's interim report or were identified by members of the panel In many of these cases the panel thought that a more in depth analysis or a more detailed application of suggestions or recommendations made by the Panel would either be useful as input to its deliberations or could be used to help communicate more individual views of members of the Panel to the defense test community This resulted in several research efforts Given various criteria especially immediate relevance to the test and acquisition community the Panel has decided to make available three technical or background papers each authored by a Panel member jointly with a colleague These papers are individual contributions and are not a consensus product of the Panel however the Panel has drawn from these papers in preparation of its final report **Statistics Testing and Defense Acquisition** The Panel has found each of these papers to be extremely useful and they are strongly recommended to readers of the Panel's final report

Testing of Defense Systems in an Evolutionary Acquisition Environment National Research Council, Division of Behavioral and Social Sciences and Education, Committee on National Statistics, Oversight Committee for the Workshop on Testing for Dynamic Acquisition of Defense Systems, 2006-04-13 The Department of Defense DoD recently adopted evolutionary acquisition a dynamic strategy for the development and acquisition of its defense systems Evolutionary defense systems are planned in advance to be developed through several stages in a single procurement program Each stage is planned to produce a viable system which could be fielded The system requirements for each stage of development may be specified in advance of a given stage or may be decided at the outset of that stage's development Due to the different stages that comprise an evolutionary system there exists a need for careful reexamination of current testing and evaluation policies and processes which were designed for single stage developments The Office of the Under Secretary of Defense for Acquisition Technology and Logistics USD AT L and the Director of Operational Testing and Evaluation DOT E asked the Committee on National Statistics CNSTAT of the National Academies to examine the key issues and implications for defense testing from the introduction of evolutionary acquisition The CNSTAT was charged with planning and conducting a workshop to study test

strategies for the evolutionary acquisition The committee reviewed defense materials defining evolutionary acquisition and interviewed test officials from the three major test service agencies to understand the current approaches used in testing systems procured through evolutionary acquisition The committee also examined possible alternatives to identify problems in implementation At the workshop that took place on December 13 14 2004 the committee tried to answer many questions including What are the appropriate roles and objectives for testing in an evolutionary environment Can a systematic disciplined process be developed for testing and evaluation in such a fluid and flexible environment and Is there adequate technical expertise within the acquisition community to fully exploit data gathered from previous stages to effectively combine information from various sources for test design and analysis Testing of Defense Systems in an Evolutionary Acquisition Environment provides the conclusions and recommendations of the CNSTAT following the workshop and its other investigations

and its other investigations *Operations Research for Military Organizations* Tozan, Hakan, Karatas, Mumtaz, 2018-07-27

The study of operations research arose during World War II to enhance the effectiveness of weapons and equipment used on the battlefield. Since then, operations research techniques have also been used to solve several sophisticated and complex defense-related problems. *Operations Research for Military Organizations* is a critical scholarly resource that examines the issues that have an impact on aspects of contemporary quantitative applications of operations research methods in the military. It also addresses innovative applications, techniques, and methodologies to assist in solving defense and military-related problems. Featuring coverage on a broad range of topics such as combat planning, tactical decision aids, and weapon system simulations, this book is geared towards defense contractors, military consultants, military personnel, policy makers, and government departments seeking current research on defense methodologies.

Analytic Methods in Systems and Software Testing Ron S. Kenett, Fabrizio Ruggeri, Frederick W. Faltin, 2018-06-20

A comprehensive treatment of systems and software testing using state-of-the-art methods and tools. This book provides valuable insights into state-of-the-art software testing methods and explains, with examples, the statistical and analytic methods used in this field. Numerous examples are used to provide understanding in applying these methods to real-world problems. Leading authorities in applied statistics, computer science, and software engineering present state-of-the-art methods addressing challenges faced by practitioners and researchers involved in system and software testing. Methods include machine learning, Bayesian methods, graphical models, experimental design, generalized regression, and reliability modeling. *Analytic Methods in Systems and Software Testing* presents its comprehensive collection of methods in four parts: Part I: Testing Concepts and Methods; Part II: Statistical Models; Part III: Testing Infrastructures; and Part IV: Testing Applications. It seeks to maintain a focus on analytic methods while, at the same time, offering a contextual landscape of modern engineering in order to introduce related statistical and probabilistic models used in this domain. This makes the book an incredibly useful tool offering interesting insights on challenges in the field for researchers and practitioners alike. Compiles cutting-edge methods and examples of analytical approaches to systems and software testing from leading authorities in applied statistics, computer science, and software engineering. Combines methods and examples focused on the analytic aspects of systems and software testing. Covers logistic regression, machine learning, Bayesian methods, graphical models, experimental design, generalized regression, and reliability models. Written by leading researchers and practitioners in the field from diverse backgrounds including research, business, government, and consulting. Stimulates research at the theoretical and practical level. *Analytic Methods in Systems and Software Testing* is an excellent advanced reference directed toward industrial and academic readers whose work in systems and software development approaches or surpasses existing frontiers of testing and validation procedures.
