Stone In Architecture:

Stone in Architecture Erhard Winkler, 2013-03-14 The readers of the first two editions of *Stone Properties Durability in Man's Environment* were mostly architects restoration architects of buildings and monuments in natural stone professionals who sought basic technical information for non geologists The increasing awareness of rapidly decaying monuments and their rescue from loss to future generations have urged this writer to update the 1973 and 1975 editions now unavailable and out of print Due to the 20 year long interval extensive updating was necessary to produce this new book The present edition concentrates on the natural material stone as building stone dimension stone architectural stone and decorative field stones Recently the use of stone for thin curtain walls on buildings has become fashionable The thin slabs exposed to a new unknown complexity of stresses resulting in bowing of crystalline marble has attracted much negative publicity The costs of replacing white slabs of marble on entire buildings with its legal implications have led construction companies into bankruptcy We blame many environmental problems on acid rain Does acid rain really accelerate stone decay that much Stone preservation is being attempted with an ever increasing number of chemicals applied by as many specialists to save crumbling stone Chemists filled this need during a time of temporary job scarcity while the general geologist missed this opportunity he was too deeply involved in the search for fossil fuels and metals

Stone in Architecture Siegfried Siegesmund, Rolf Snethlage, 2011-01-25 The weathering of historical buildings and indeed of monuments and sculptures of natural stone is a problem that has been encountered for hundreds of years However a dramatic increase in deterioration in the structure of our built heritage has been observed during the past century To understand the complex interaction that the stone in a building suffers with its near environment the building and the macro environment the local climate and atmospheric conditions requires an interdisciplinary approach and the application of many disciplines Climate change over the next 100 years is likely to have a range of direct and indirect impacts on many natural and physical environments including the built environment The protection of our architectural heritage has both cultural and historical importance as well as substantial economic and ecological value Large sums of money are being spent world wide on measures for the preservation of monuments and historical buildings The past few decades has seen an unprecedented level of research activity in this area the results of which are often difficult to access and are summarized in the new edition of *STONE IN ARCHITECTURE*
